VARIABLES

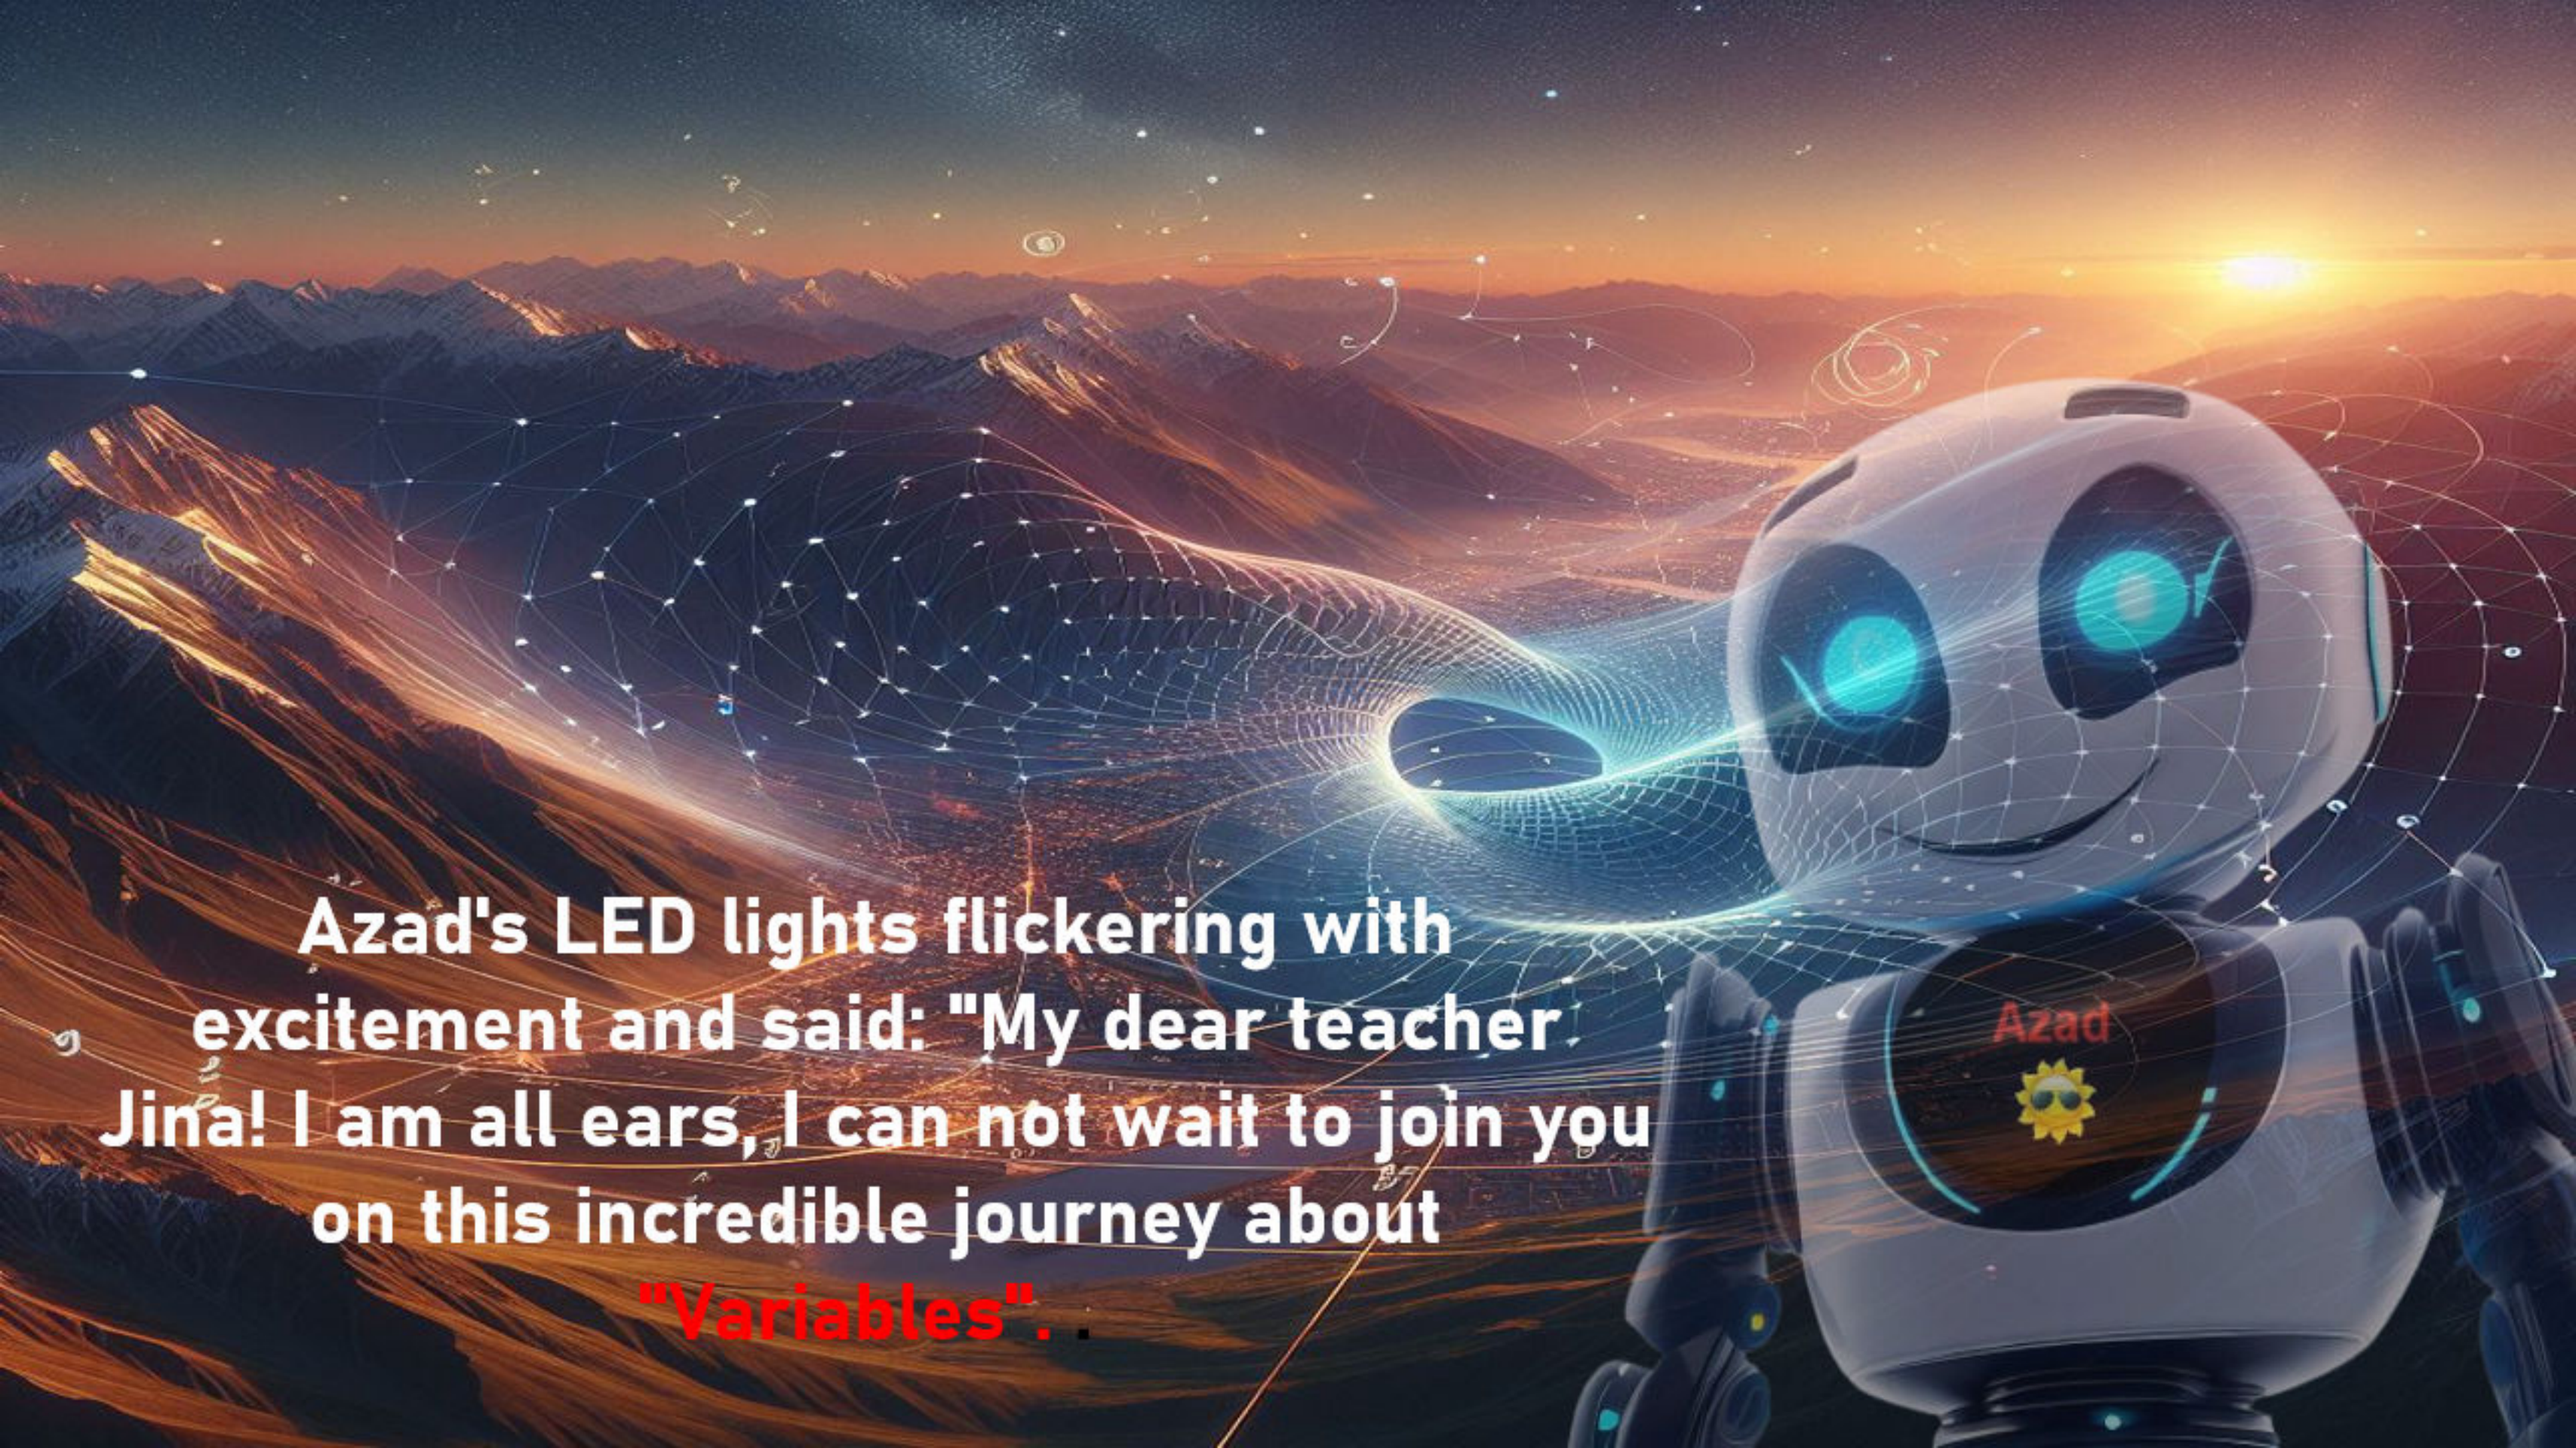
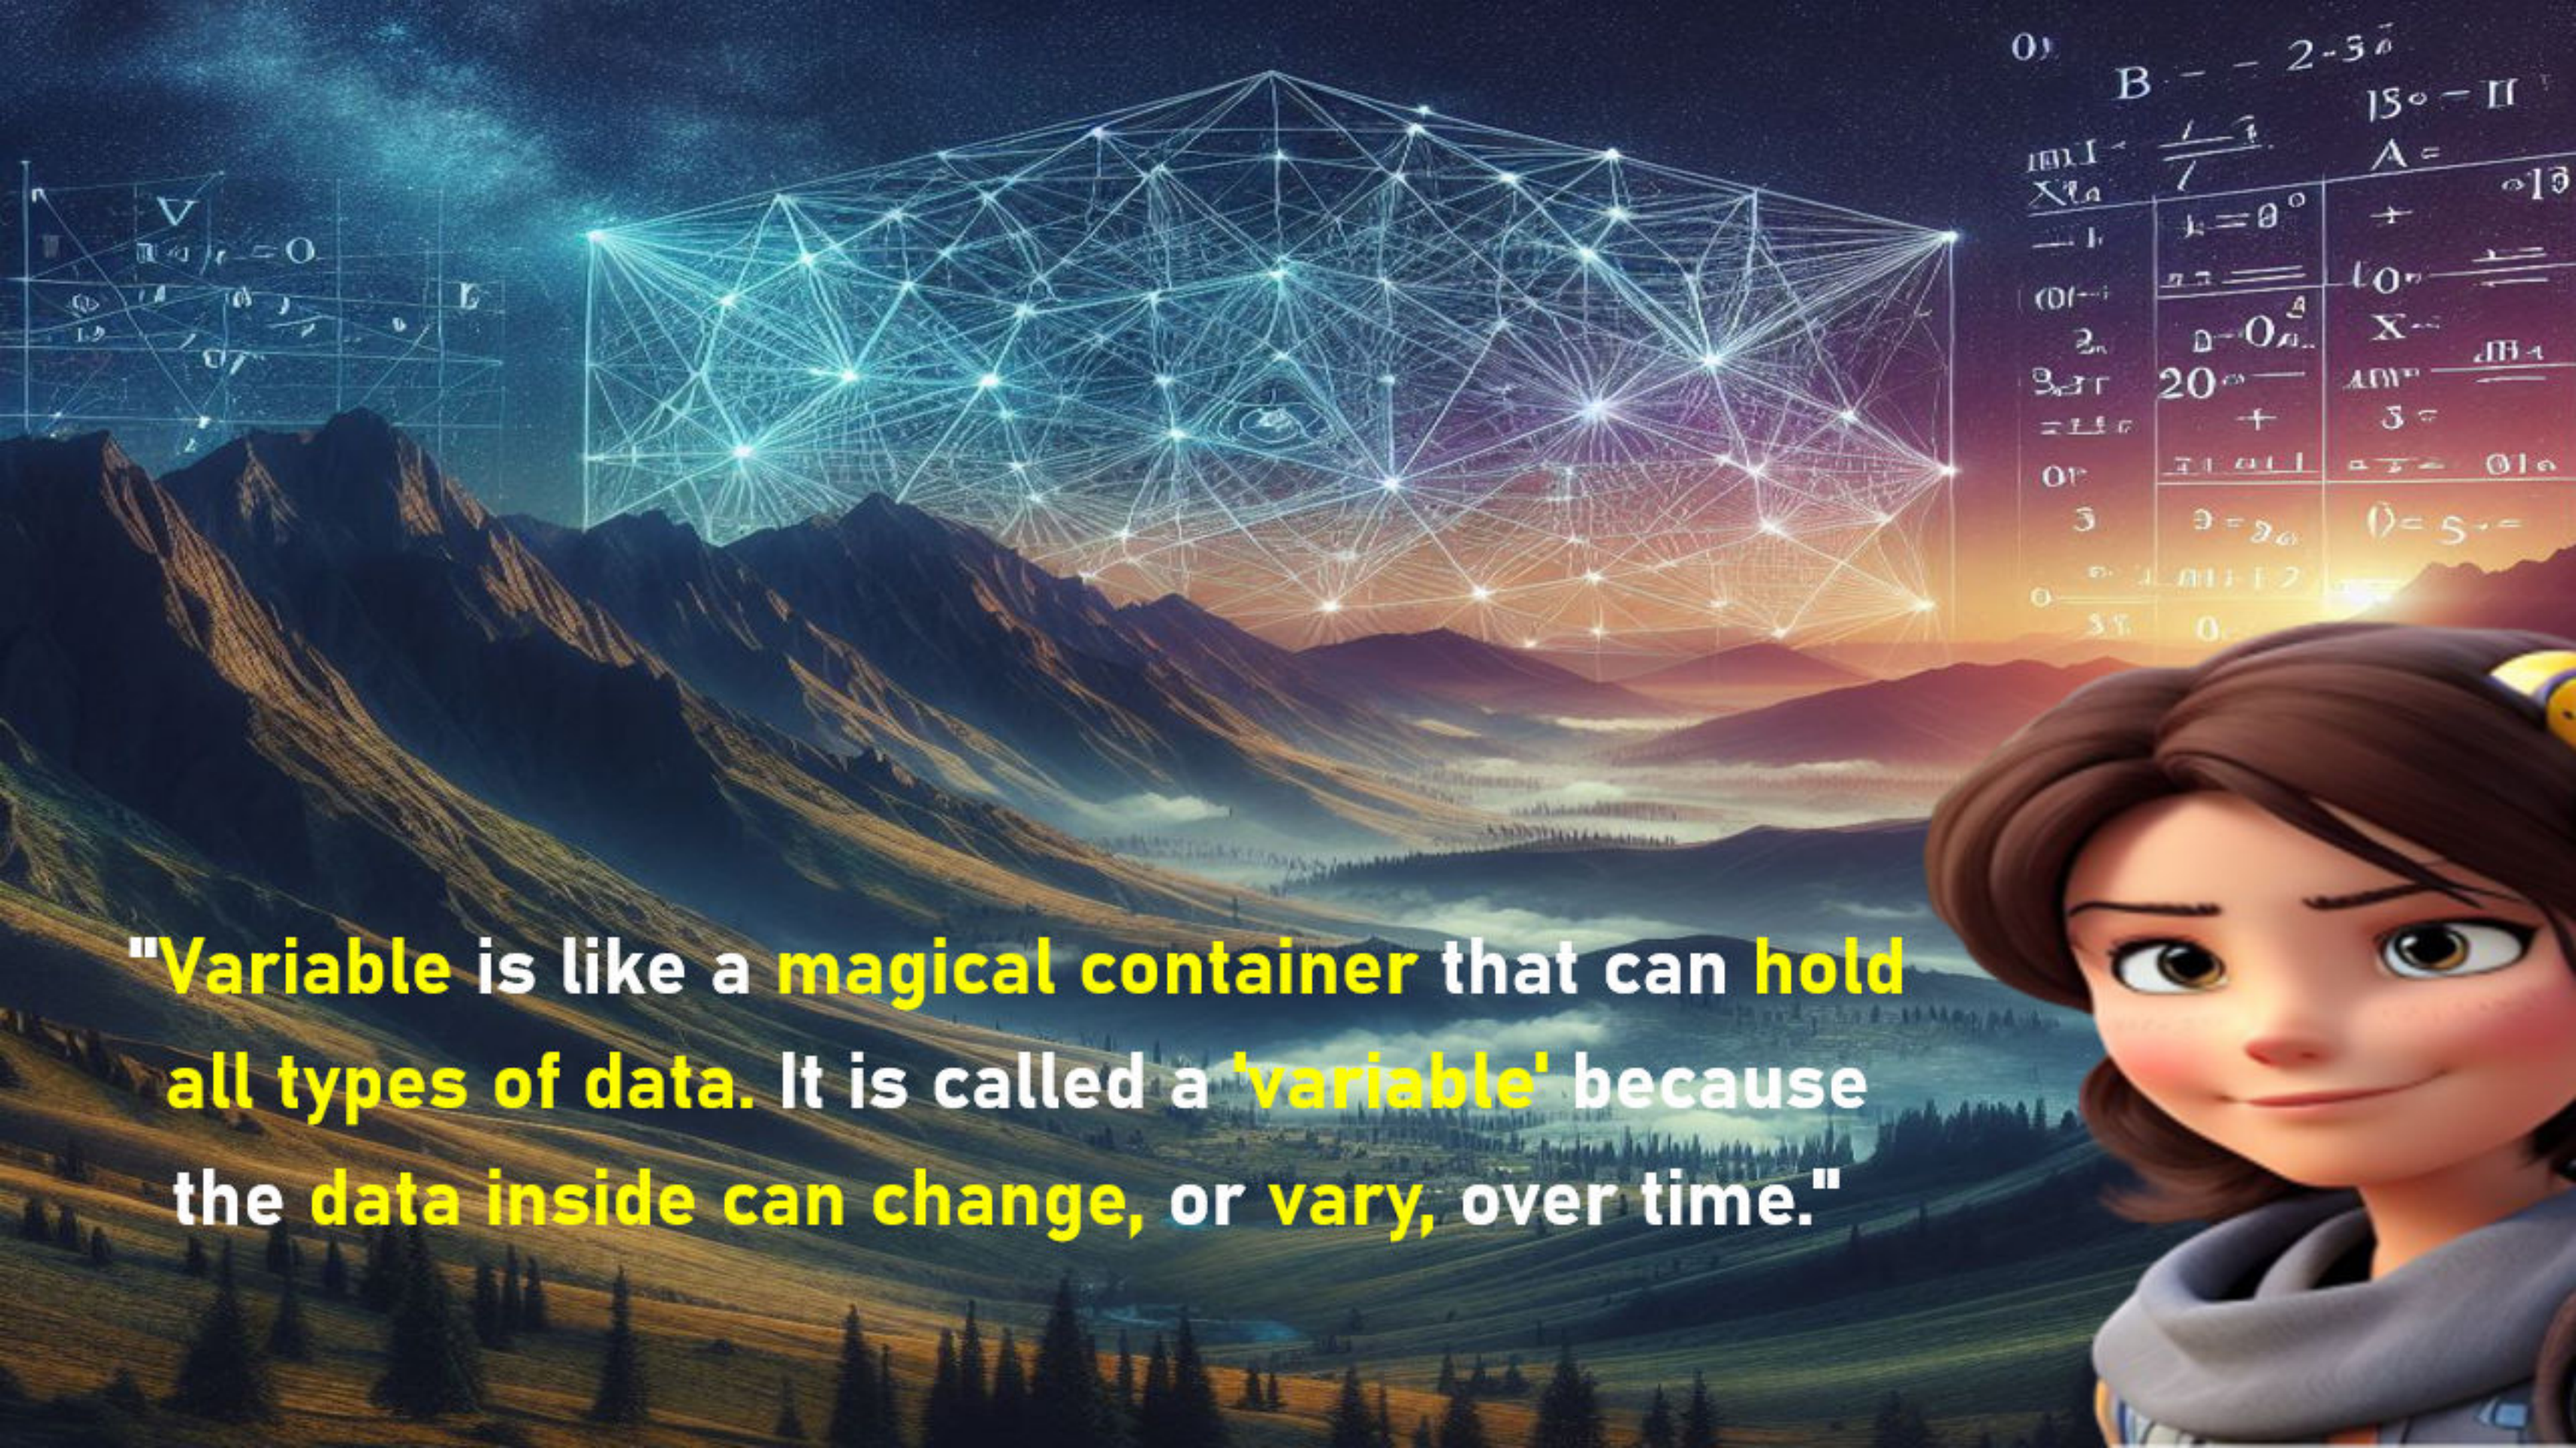
KARIM SALEHI

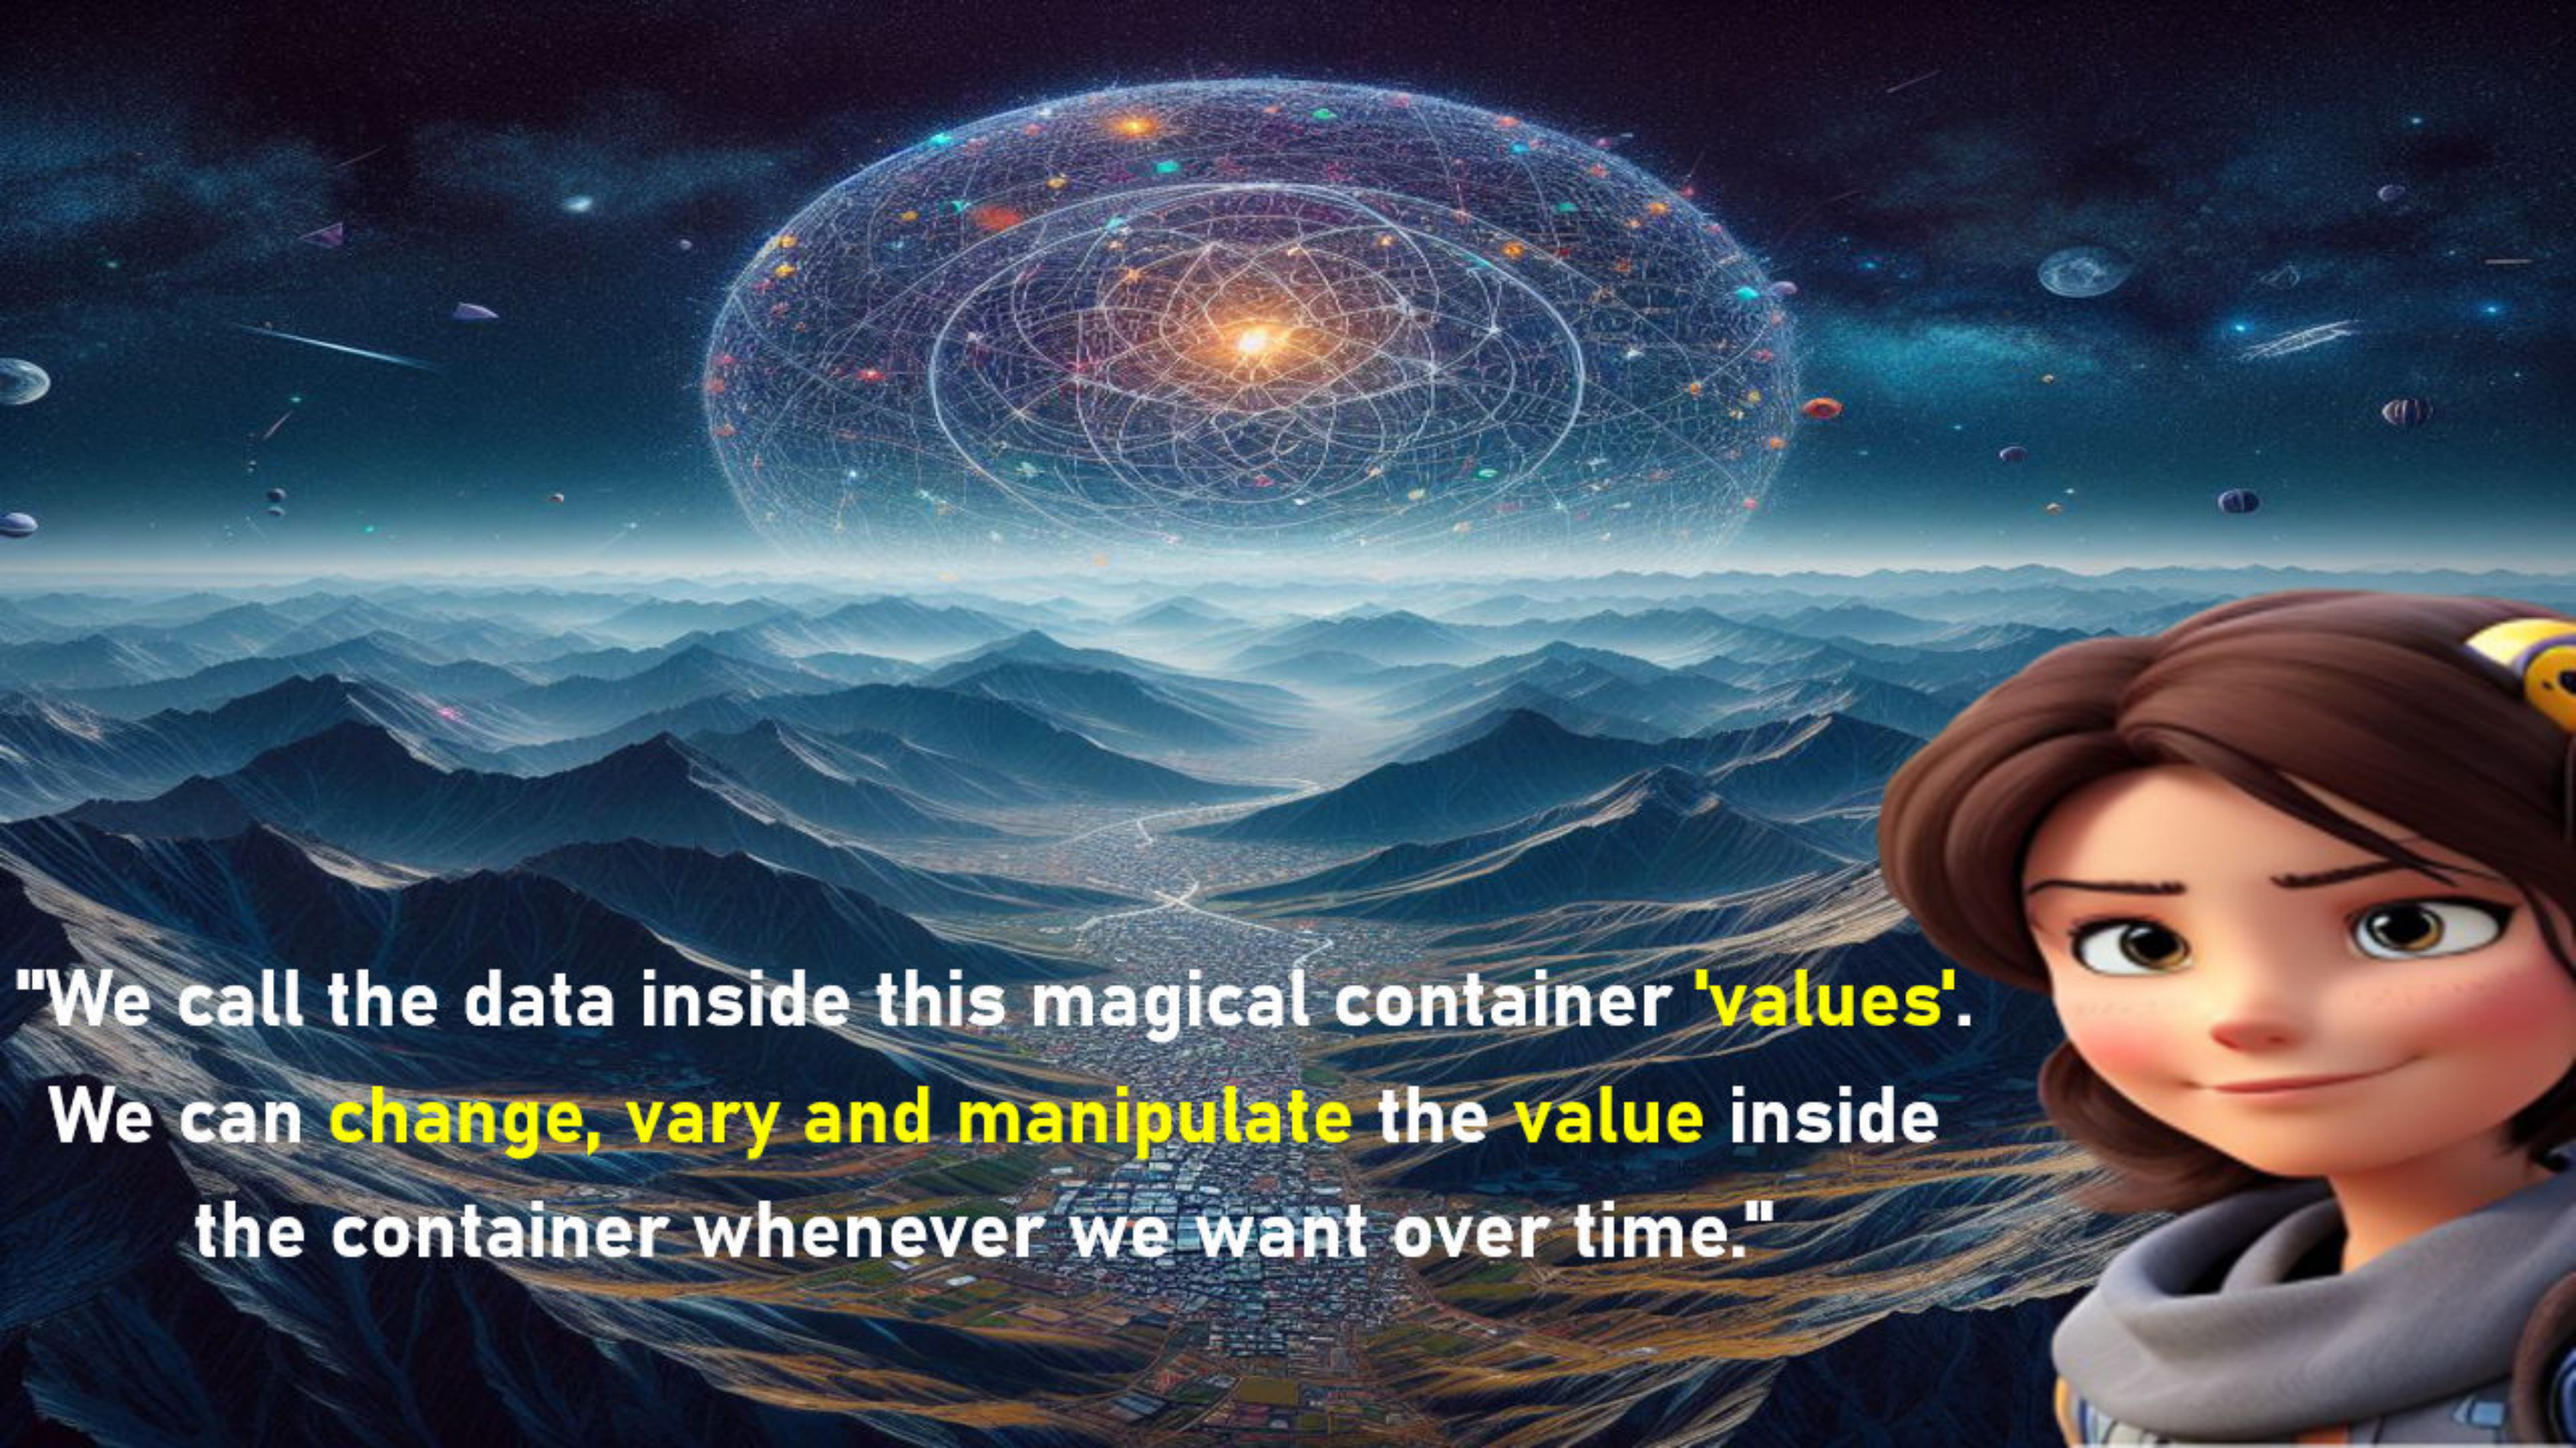


Azad's LED lights flickering with excitement and said: "My dear teacher Jina! I am all ears, I can not wait to join you on this incredible journey about "Variables". .
Azad

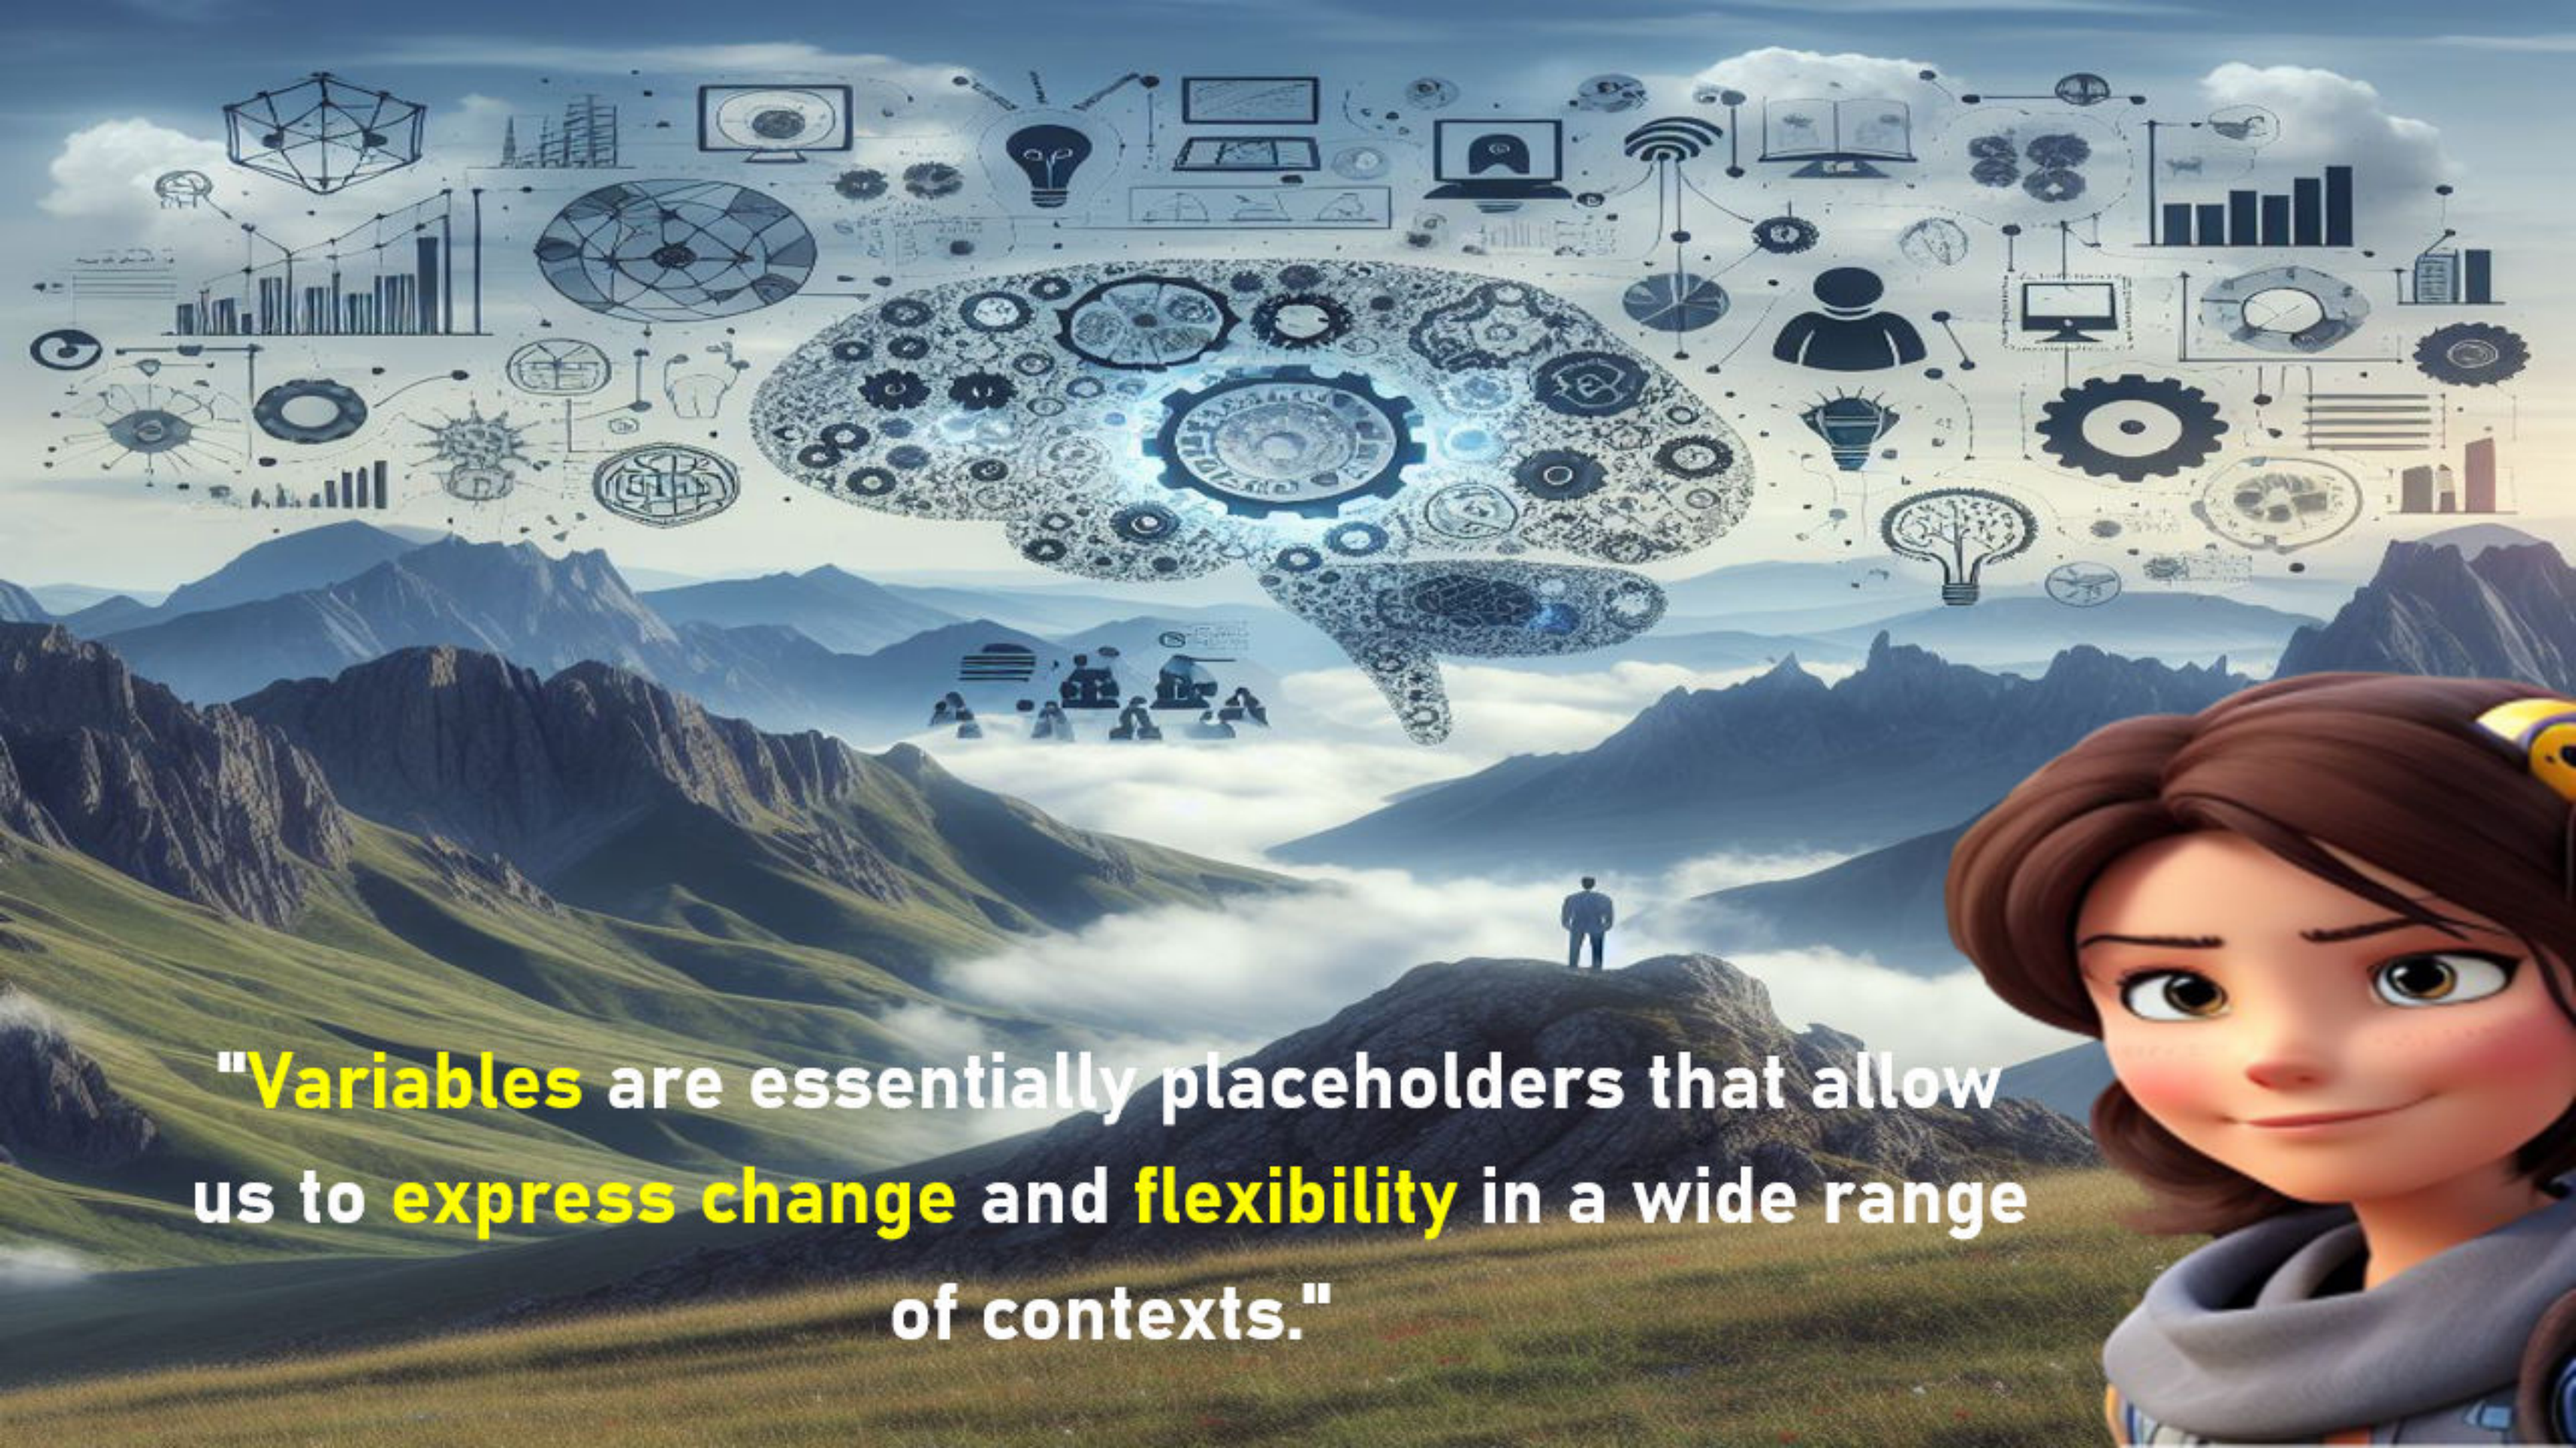
Jina: "I am glad to hear that. Thanks Azad,
Now, let's dive into the world of Variables Adventure."



"Variable is like a magical container that can hold all types of data. It is called a 'variable' because the data inside can change, or vary, over time."

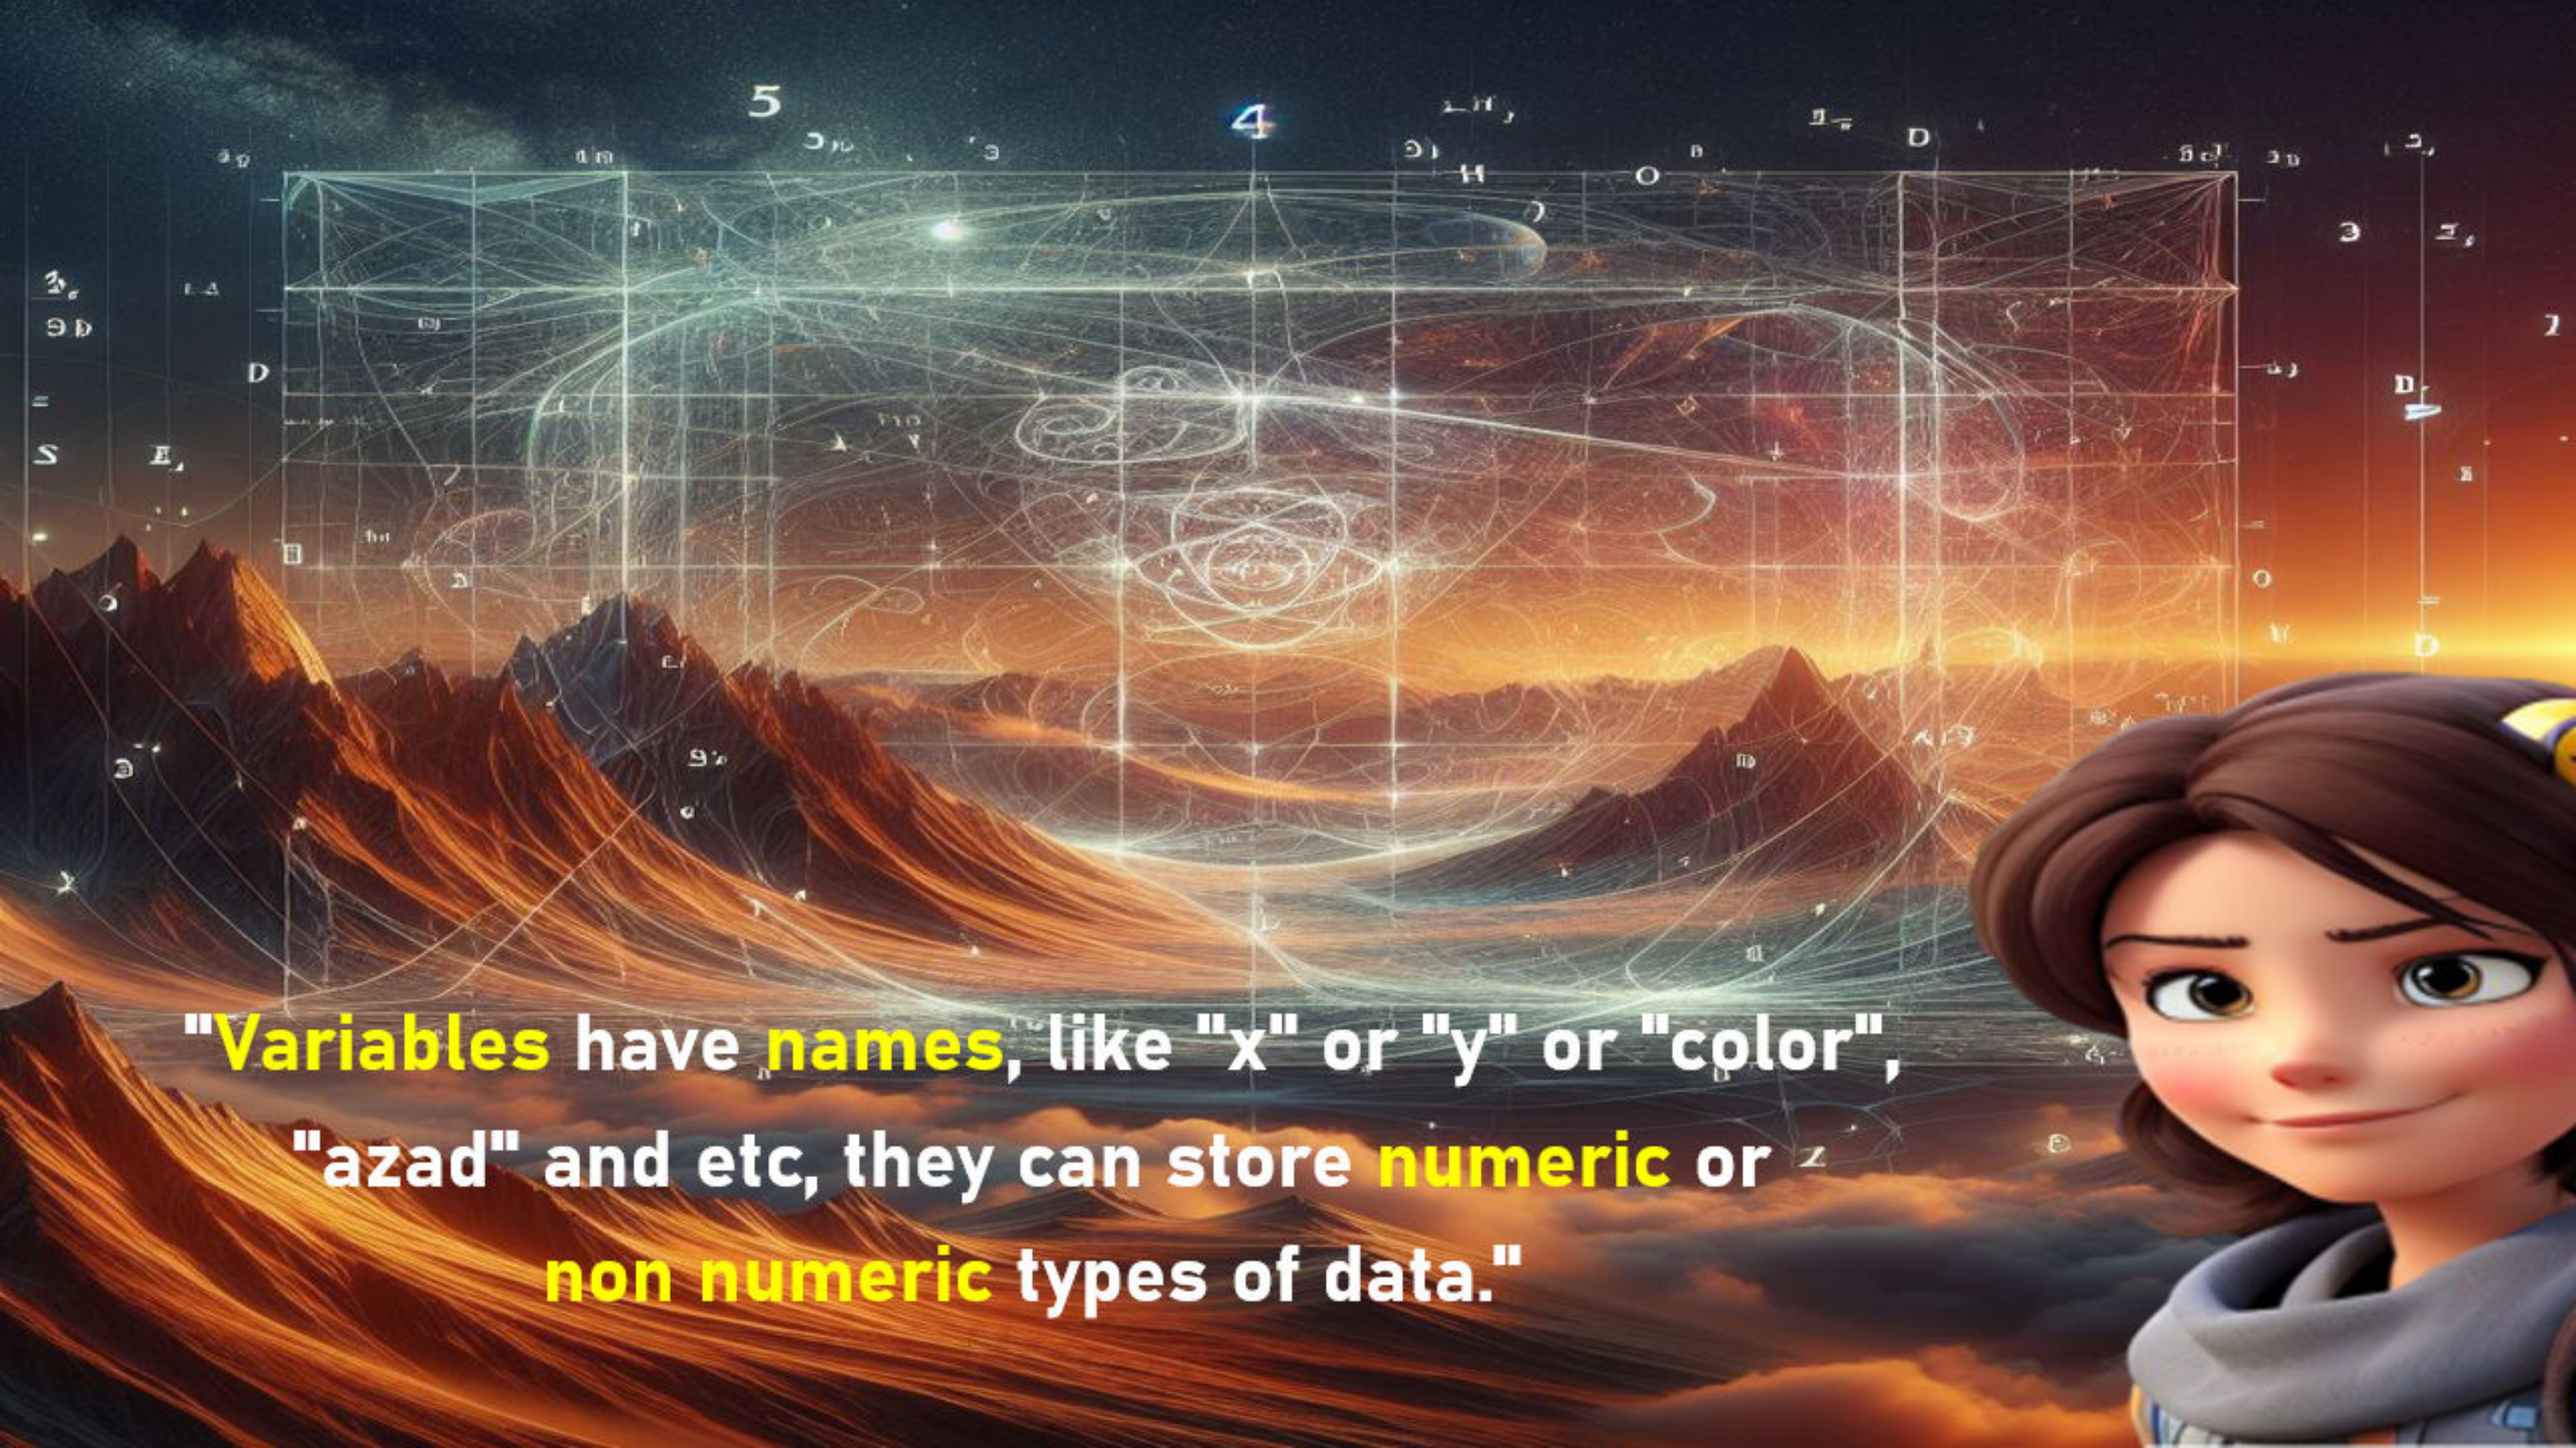


"We call the data inside this magical container 'values'.
We can change, vary and manipulate the value inside
the container whenever we want over time."



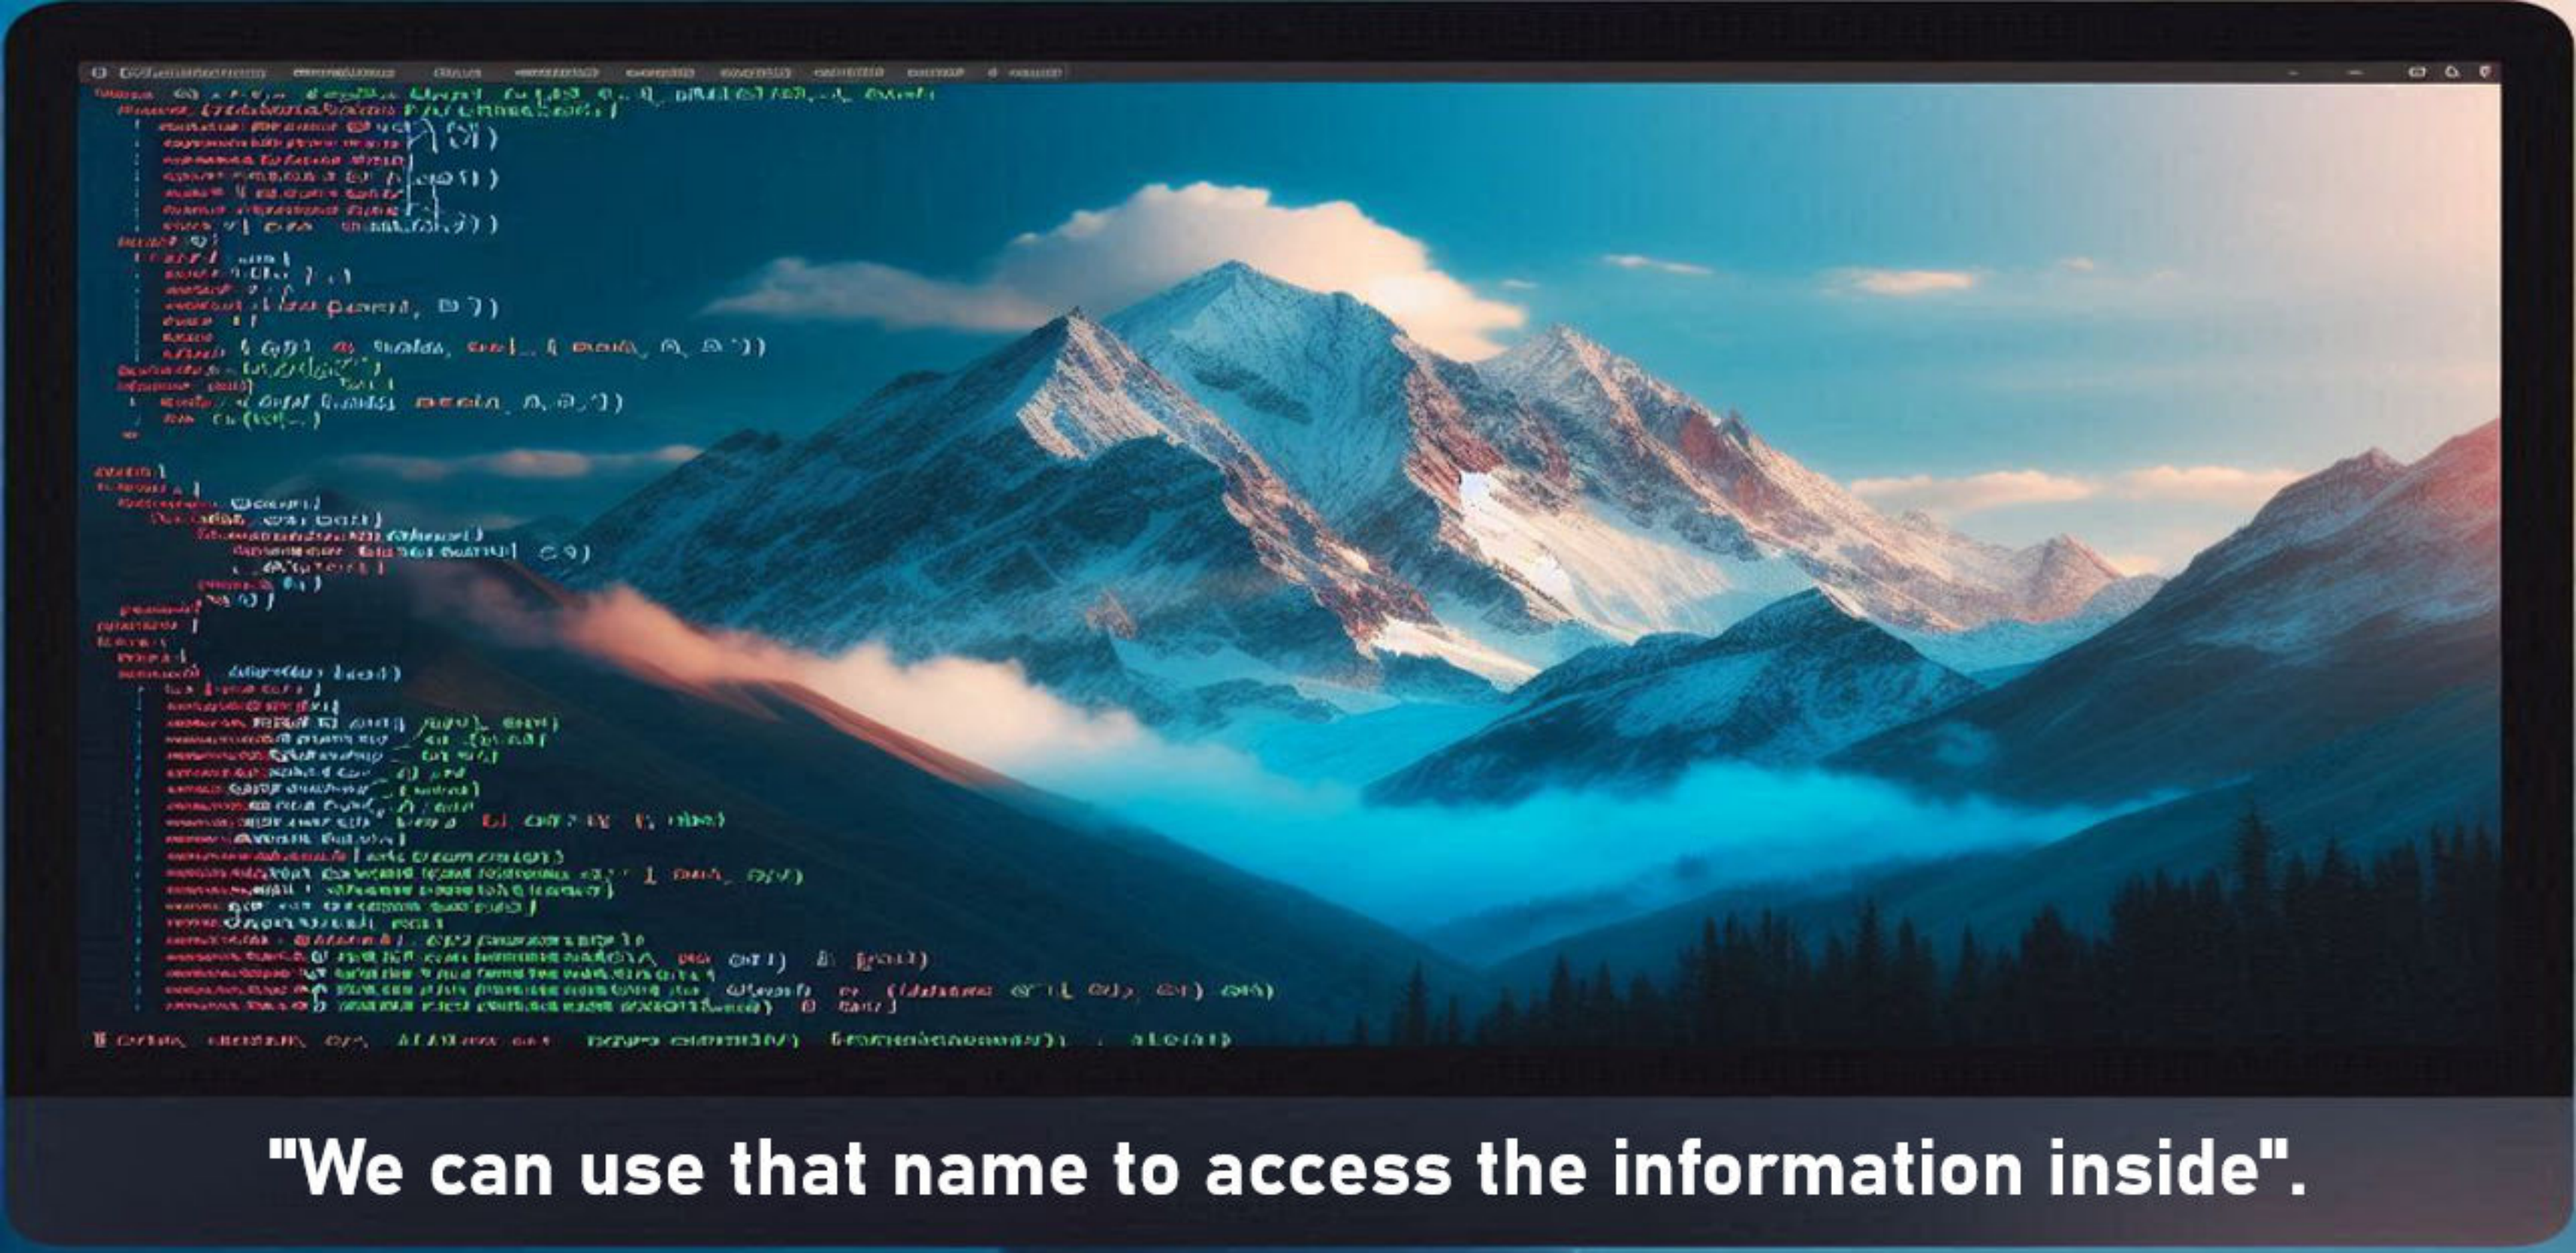
"Variables are essentially placeholders that allow us to express change and flexibility in a wide range of contexts."

"Variables are designed to change, allowing us to track real-world changes."

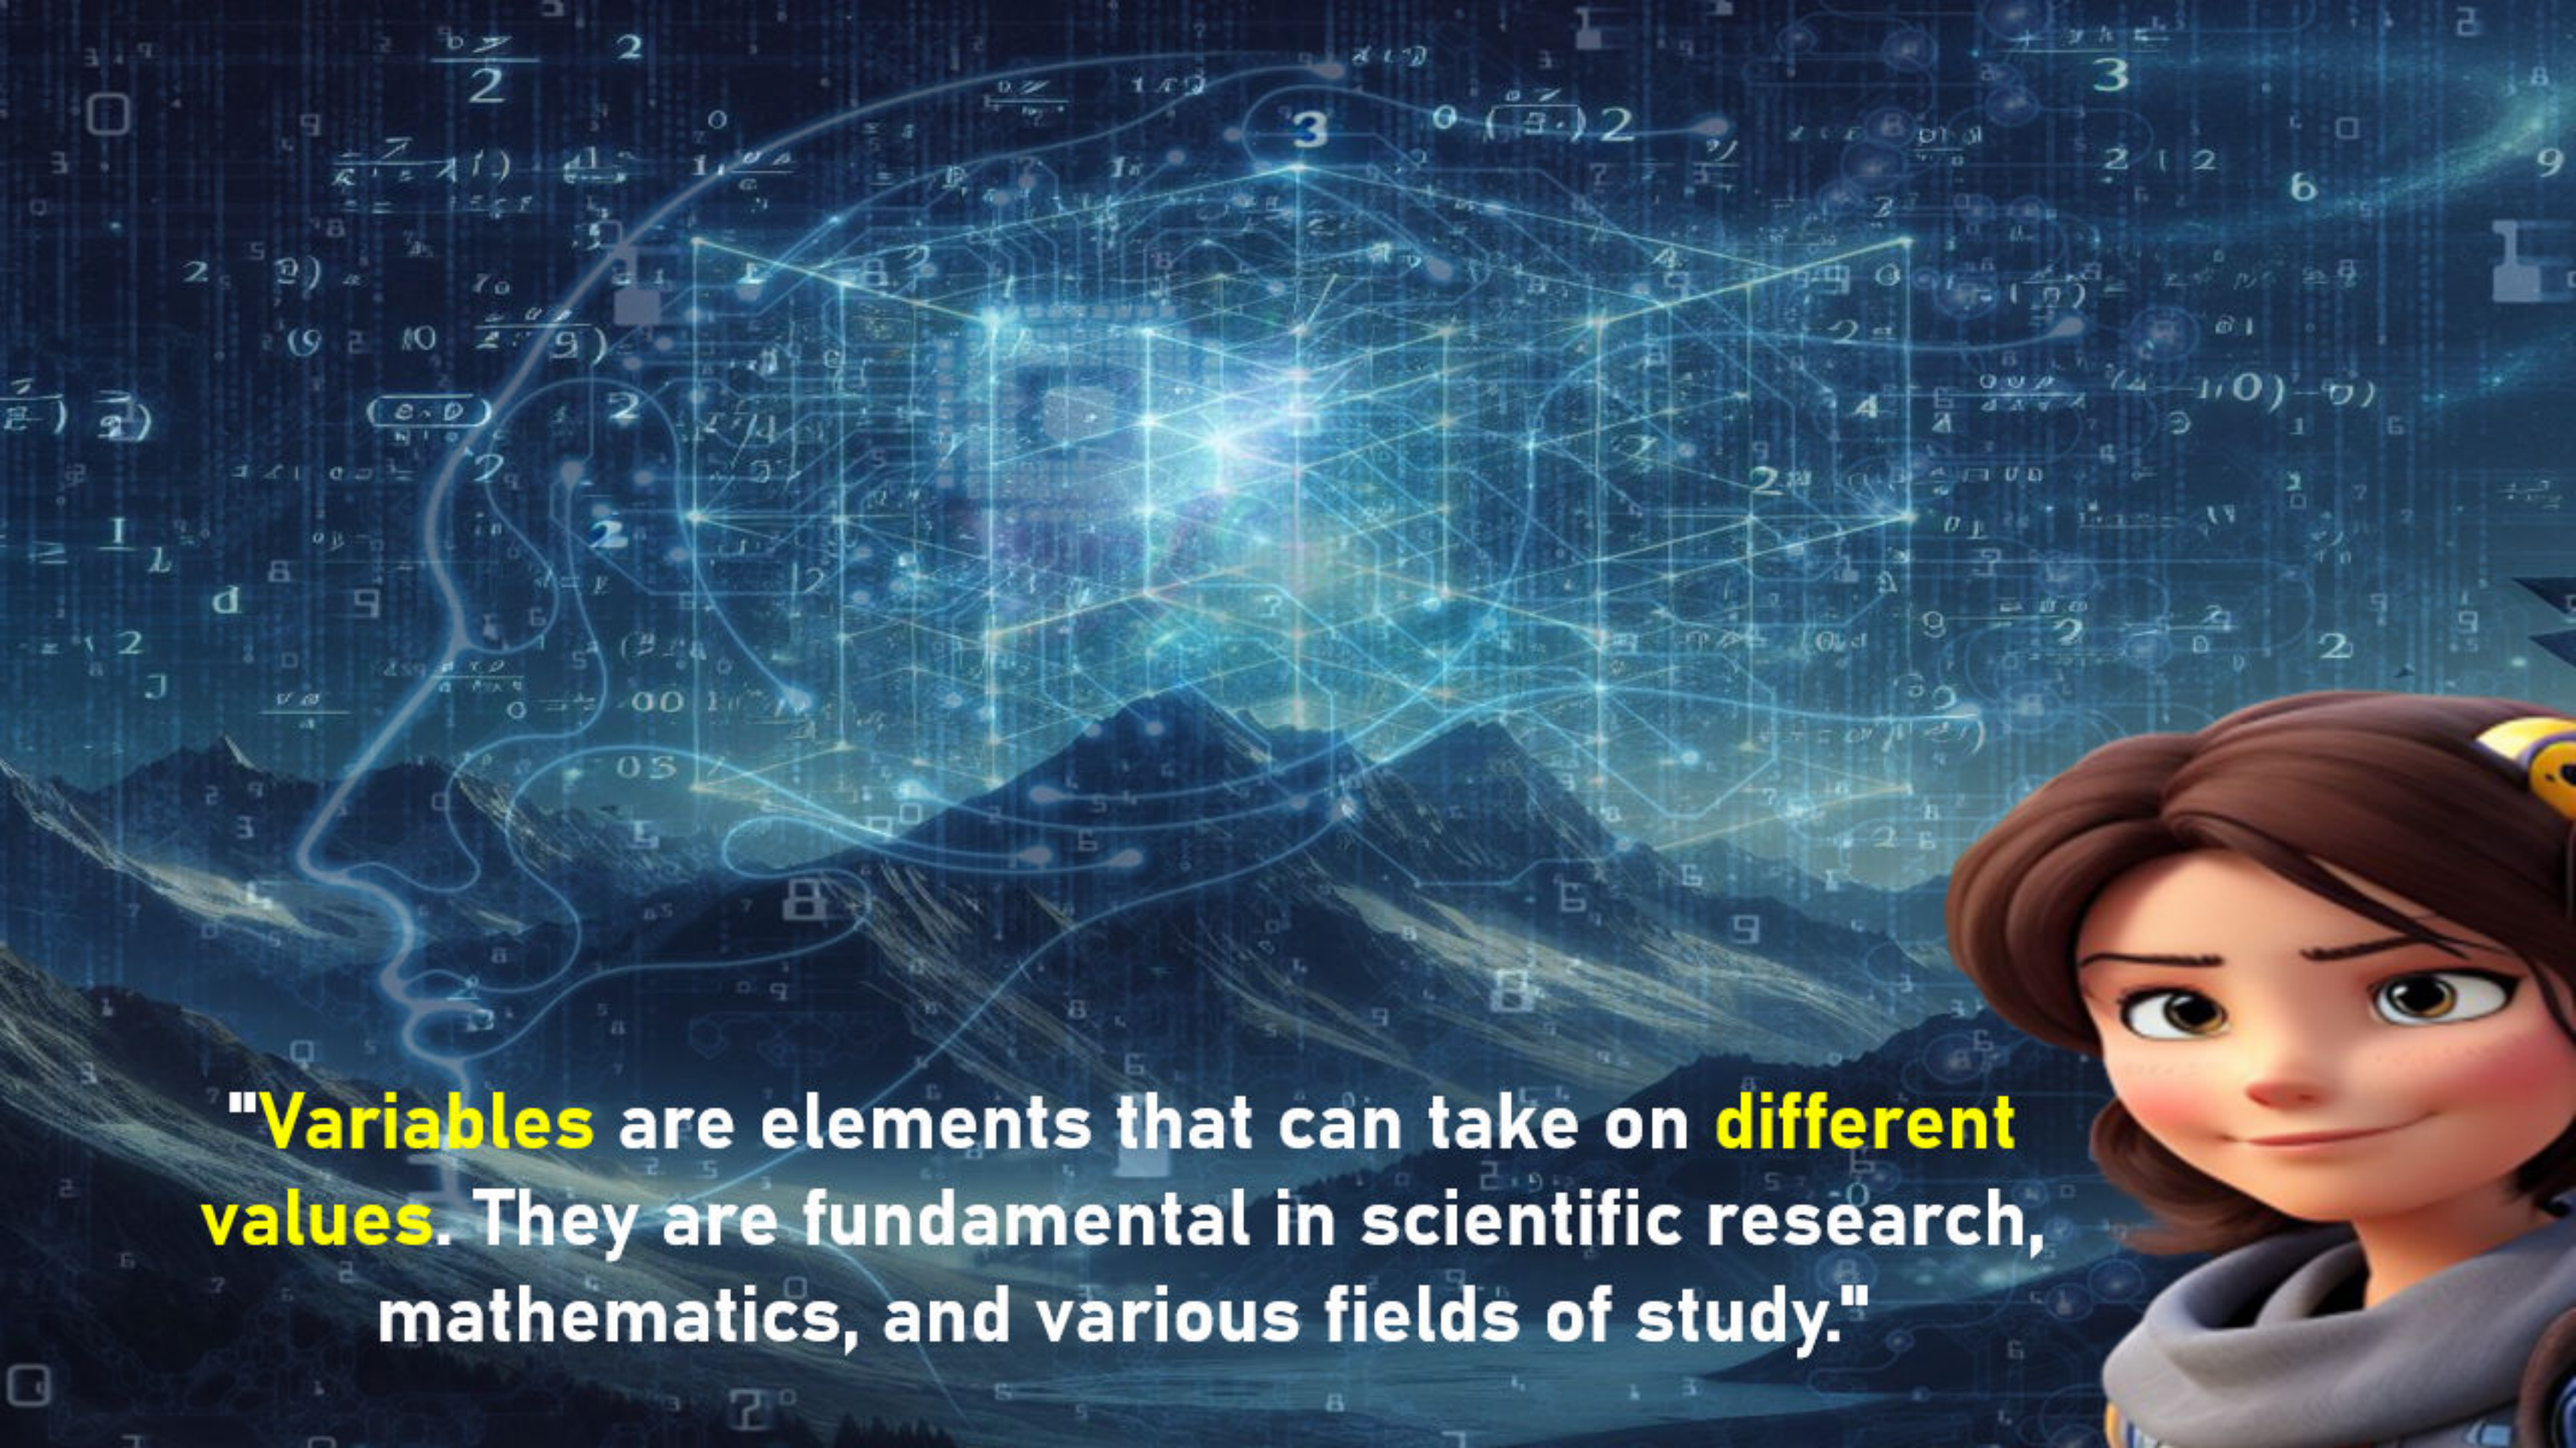


"Variables have names, like "x" or "y" or "color",
"azad" and etc, they can store numeric or
non numeric types of data."

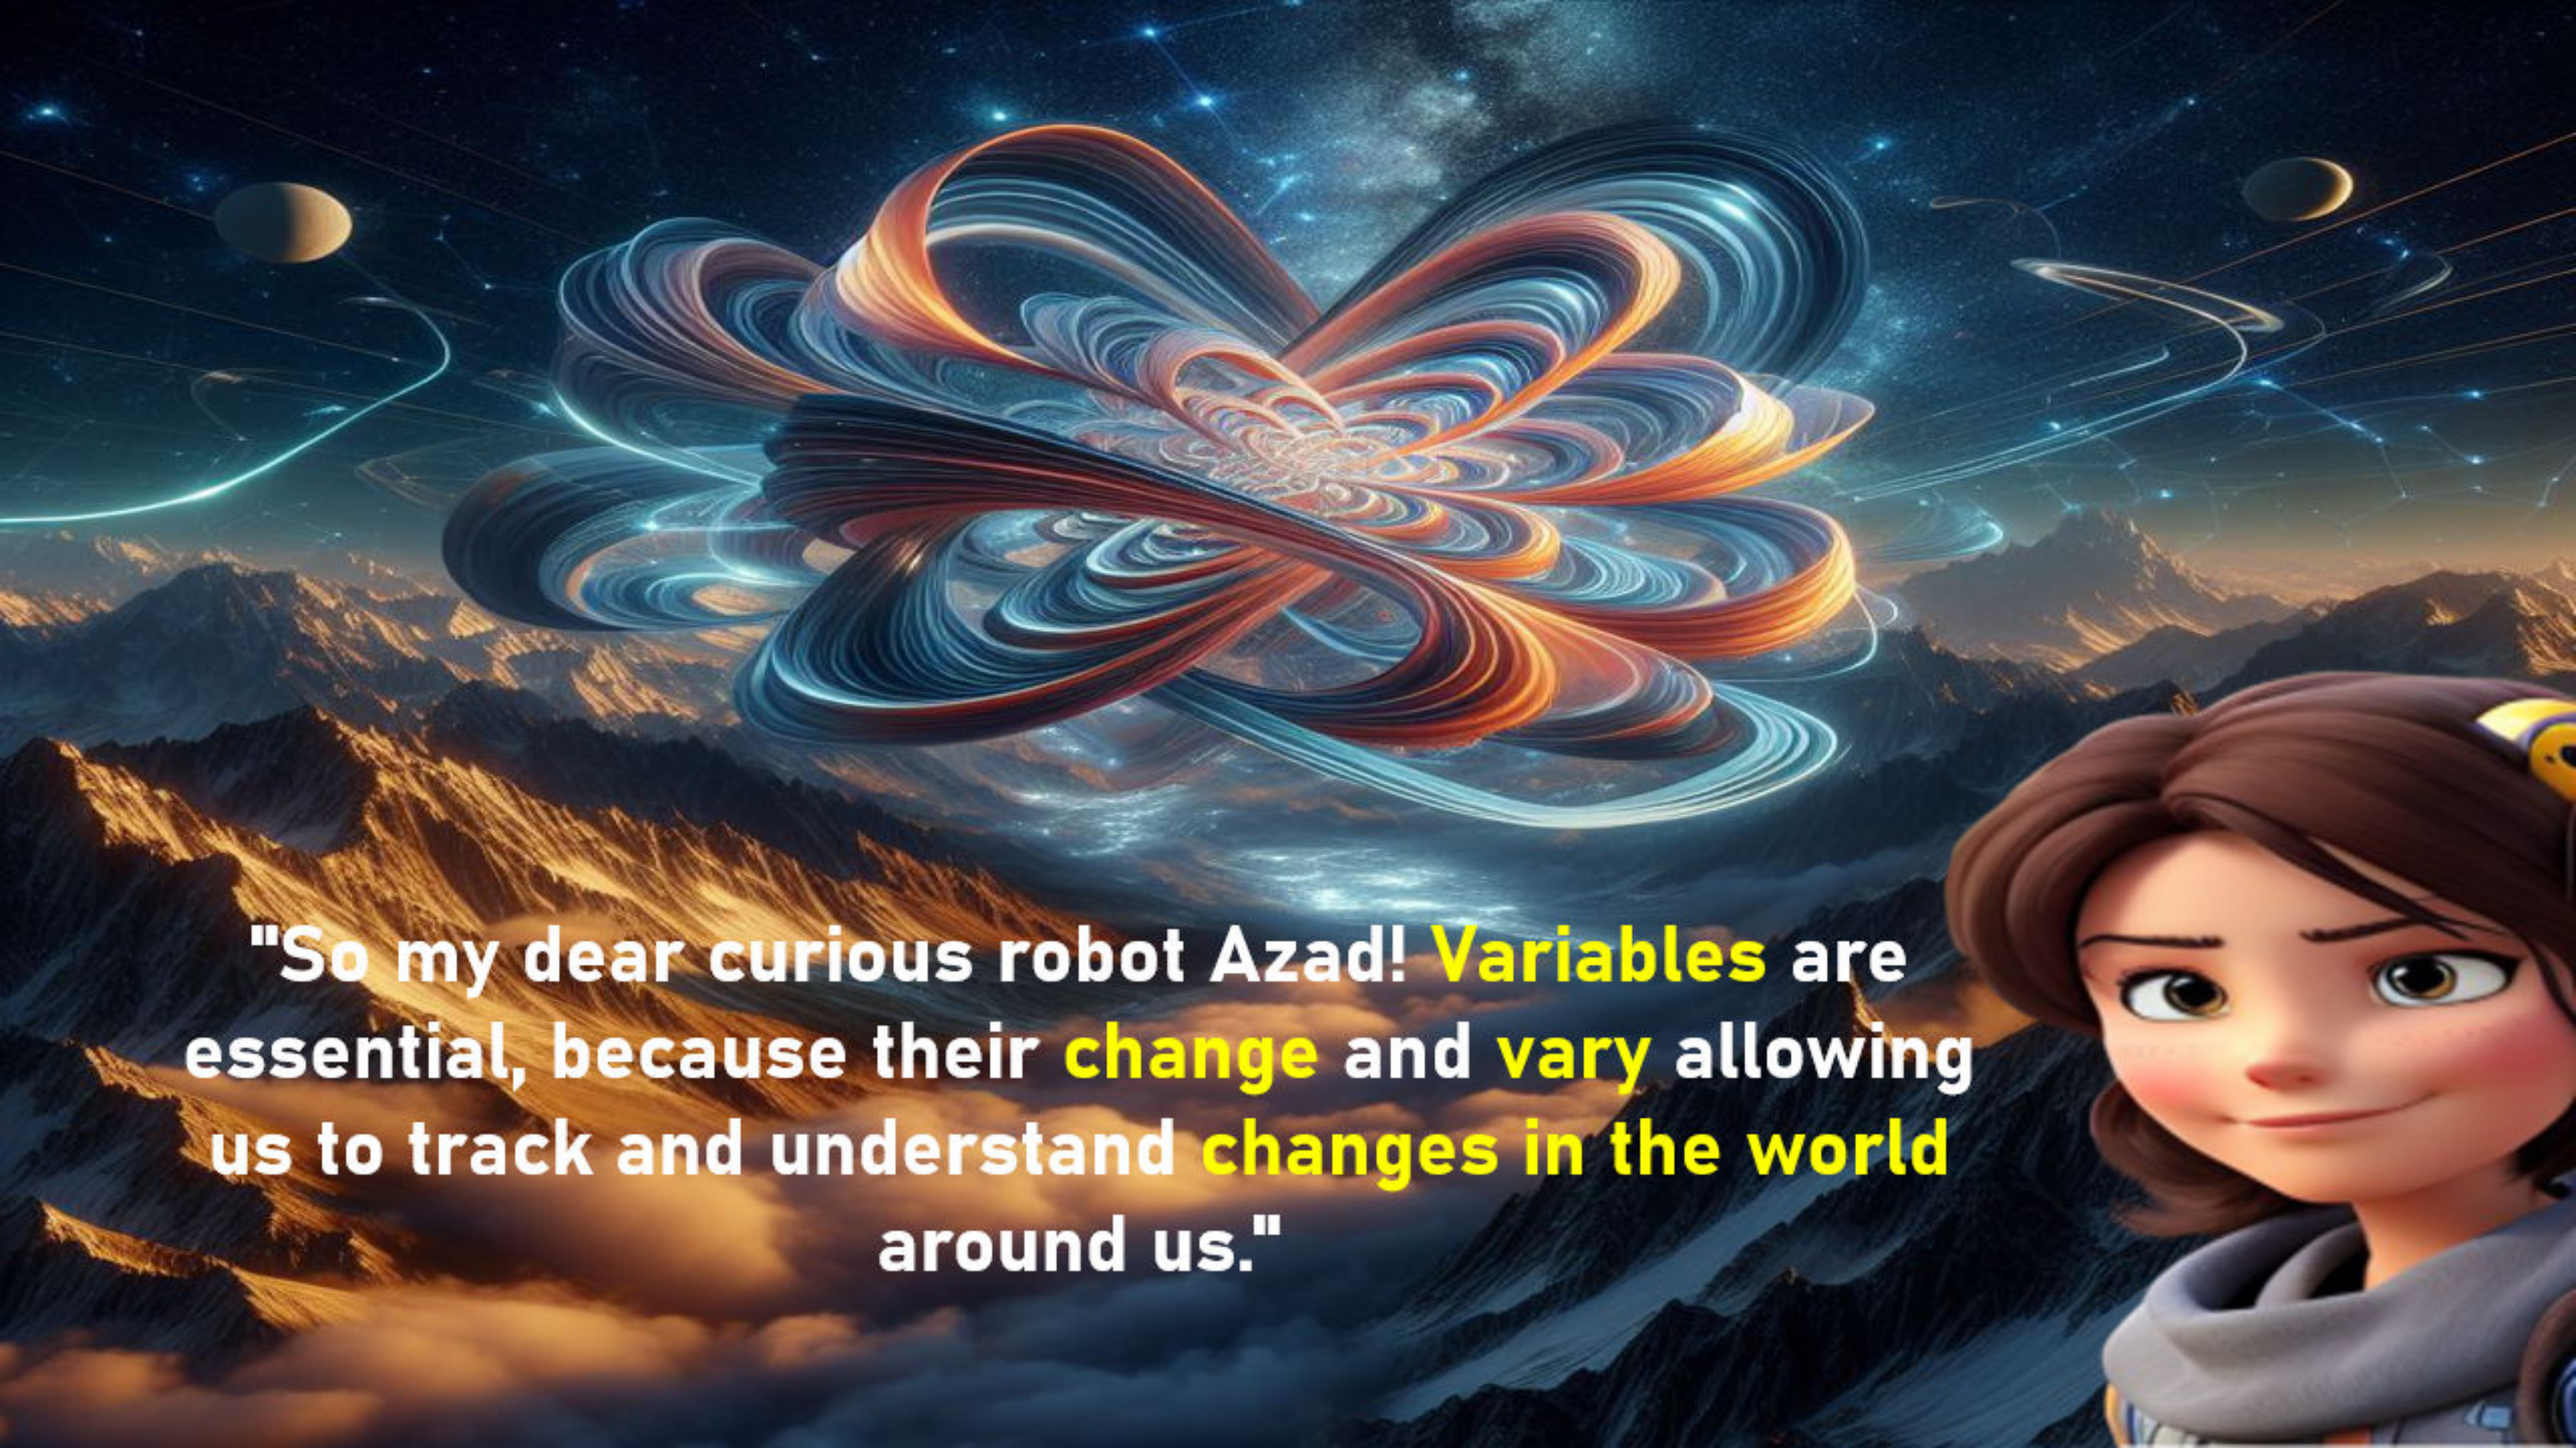
"The name of a variable is simply a label
and uniquely identifies the variable. It helps to
distinguish one variable from another, especially
when working with multiple variables in code."



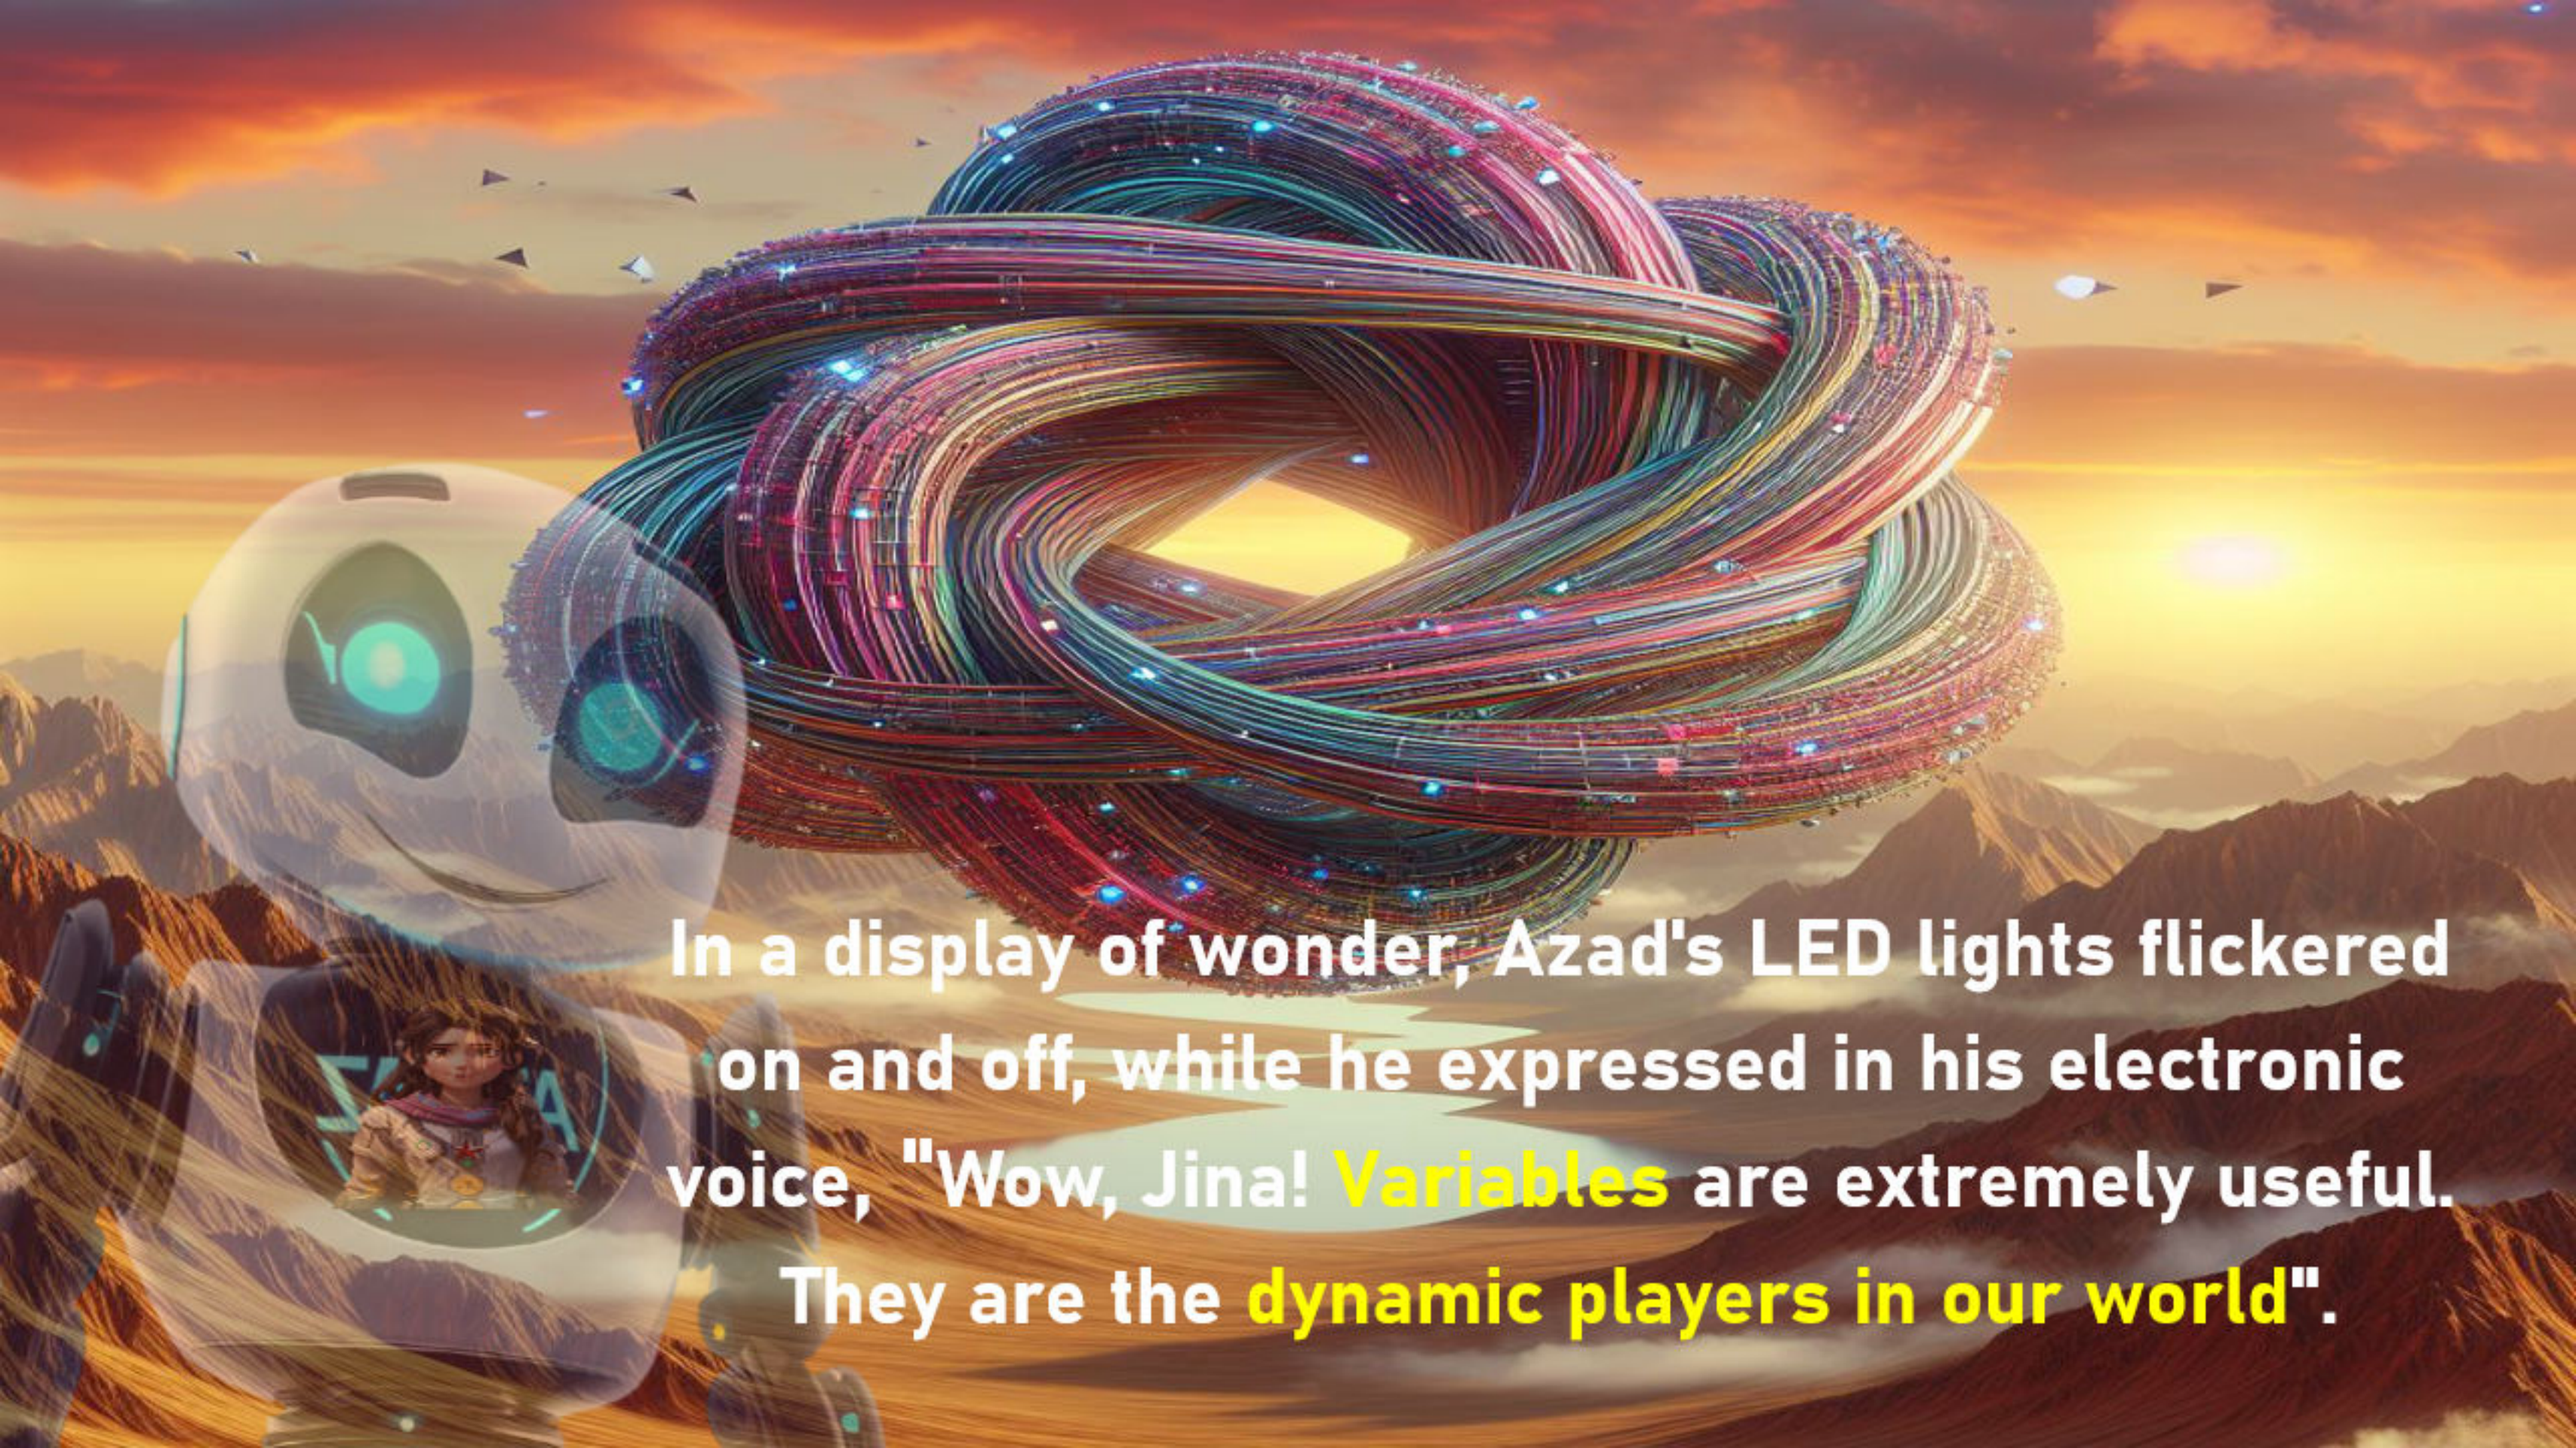
"We can use that name to access the information inside".



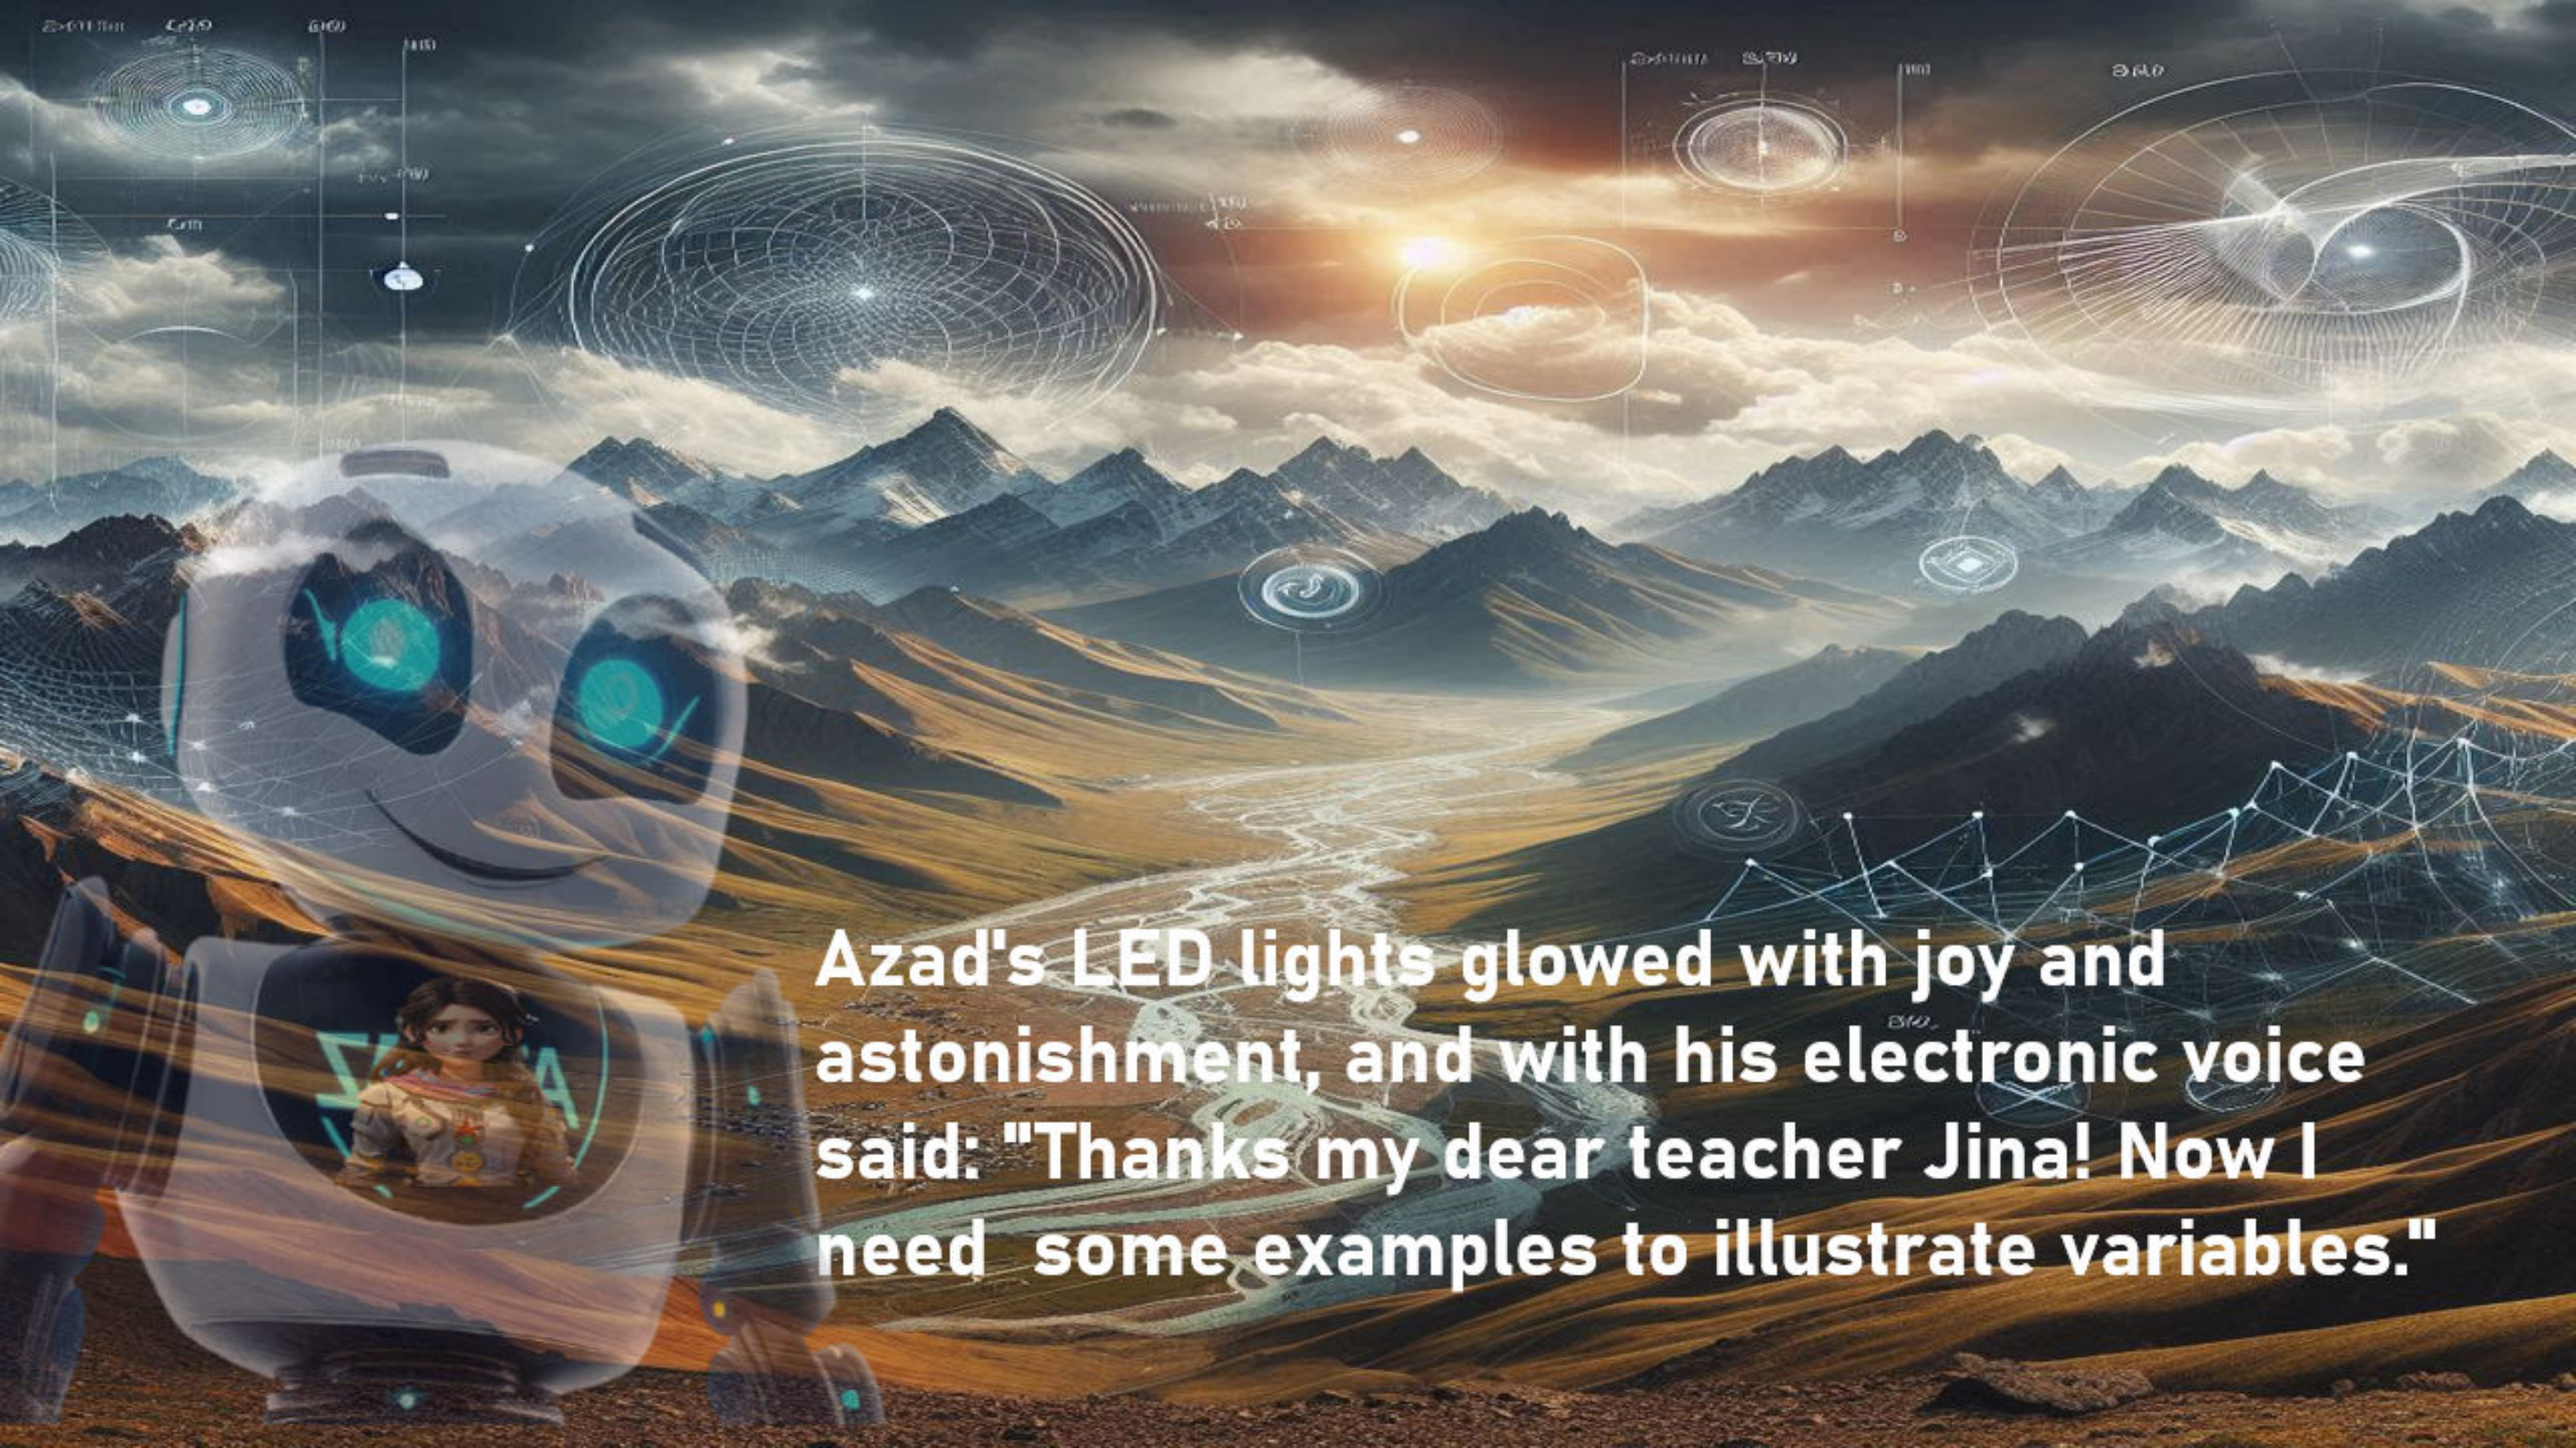
"Variables are elements that can take on different values. They are fundamental in scientific research, mathematics, and various fields of study."



"So my dear curious robot Azad! Variables are essential, because their change and vary allowing us to track and understand changes in the world around us."

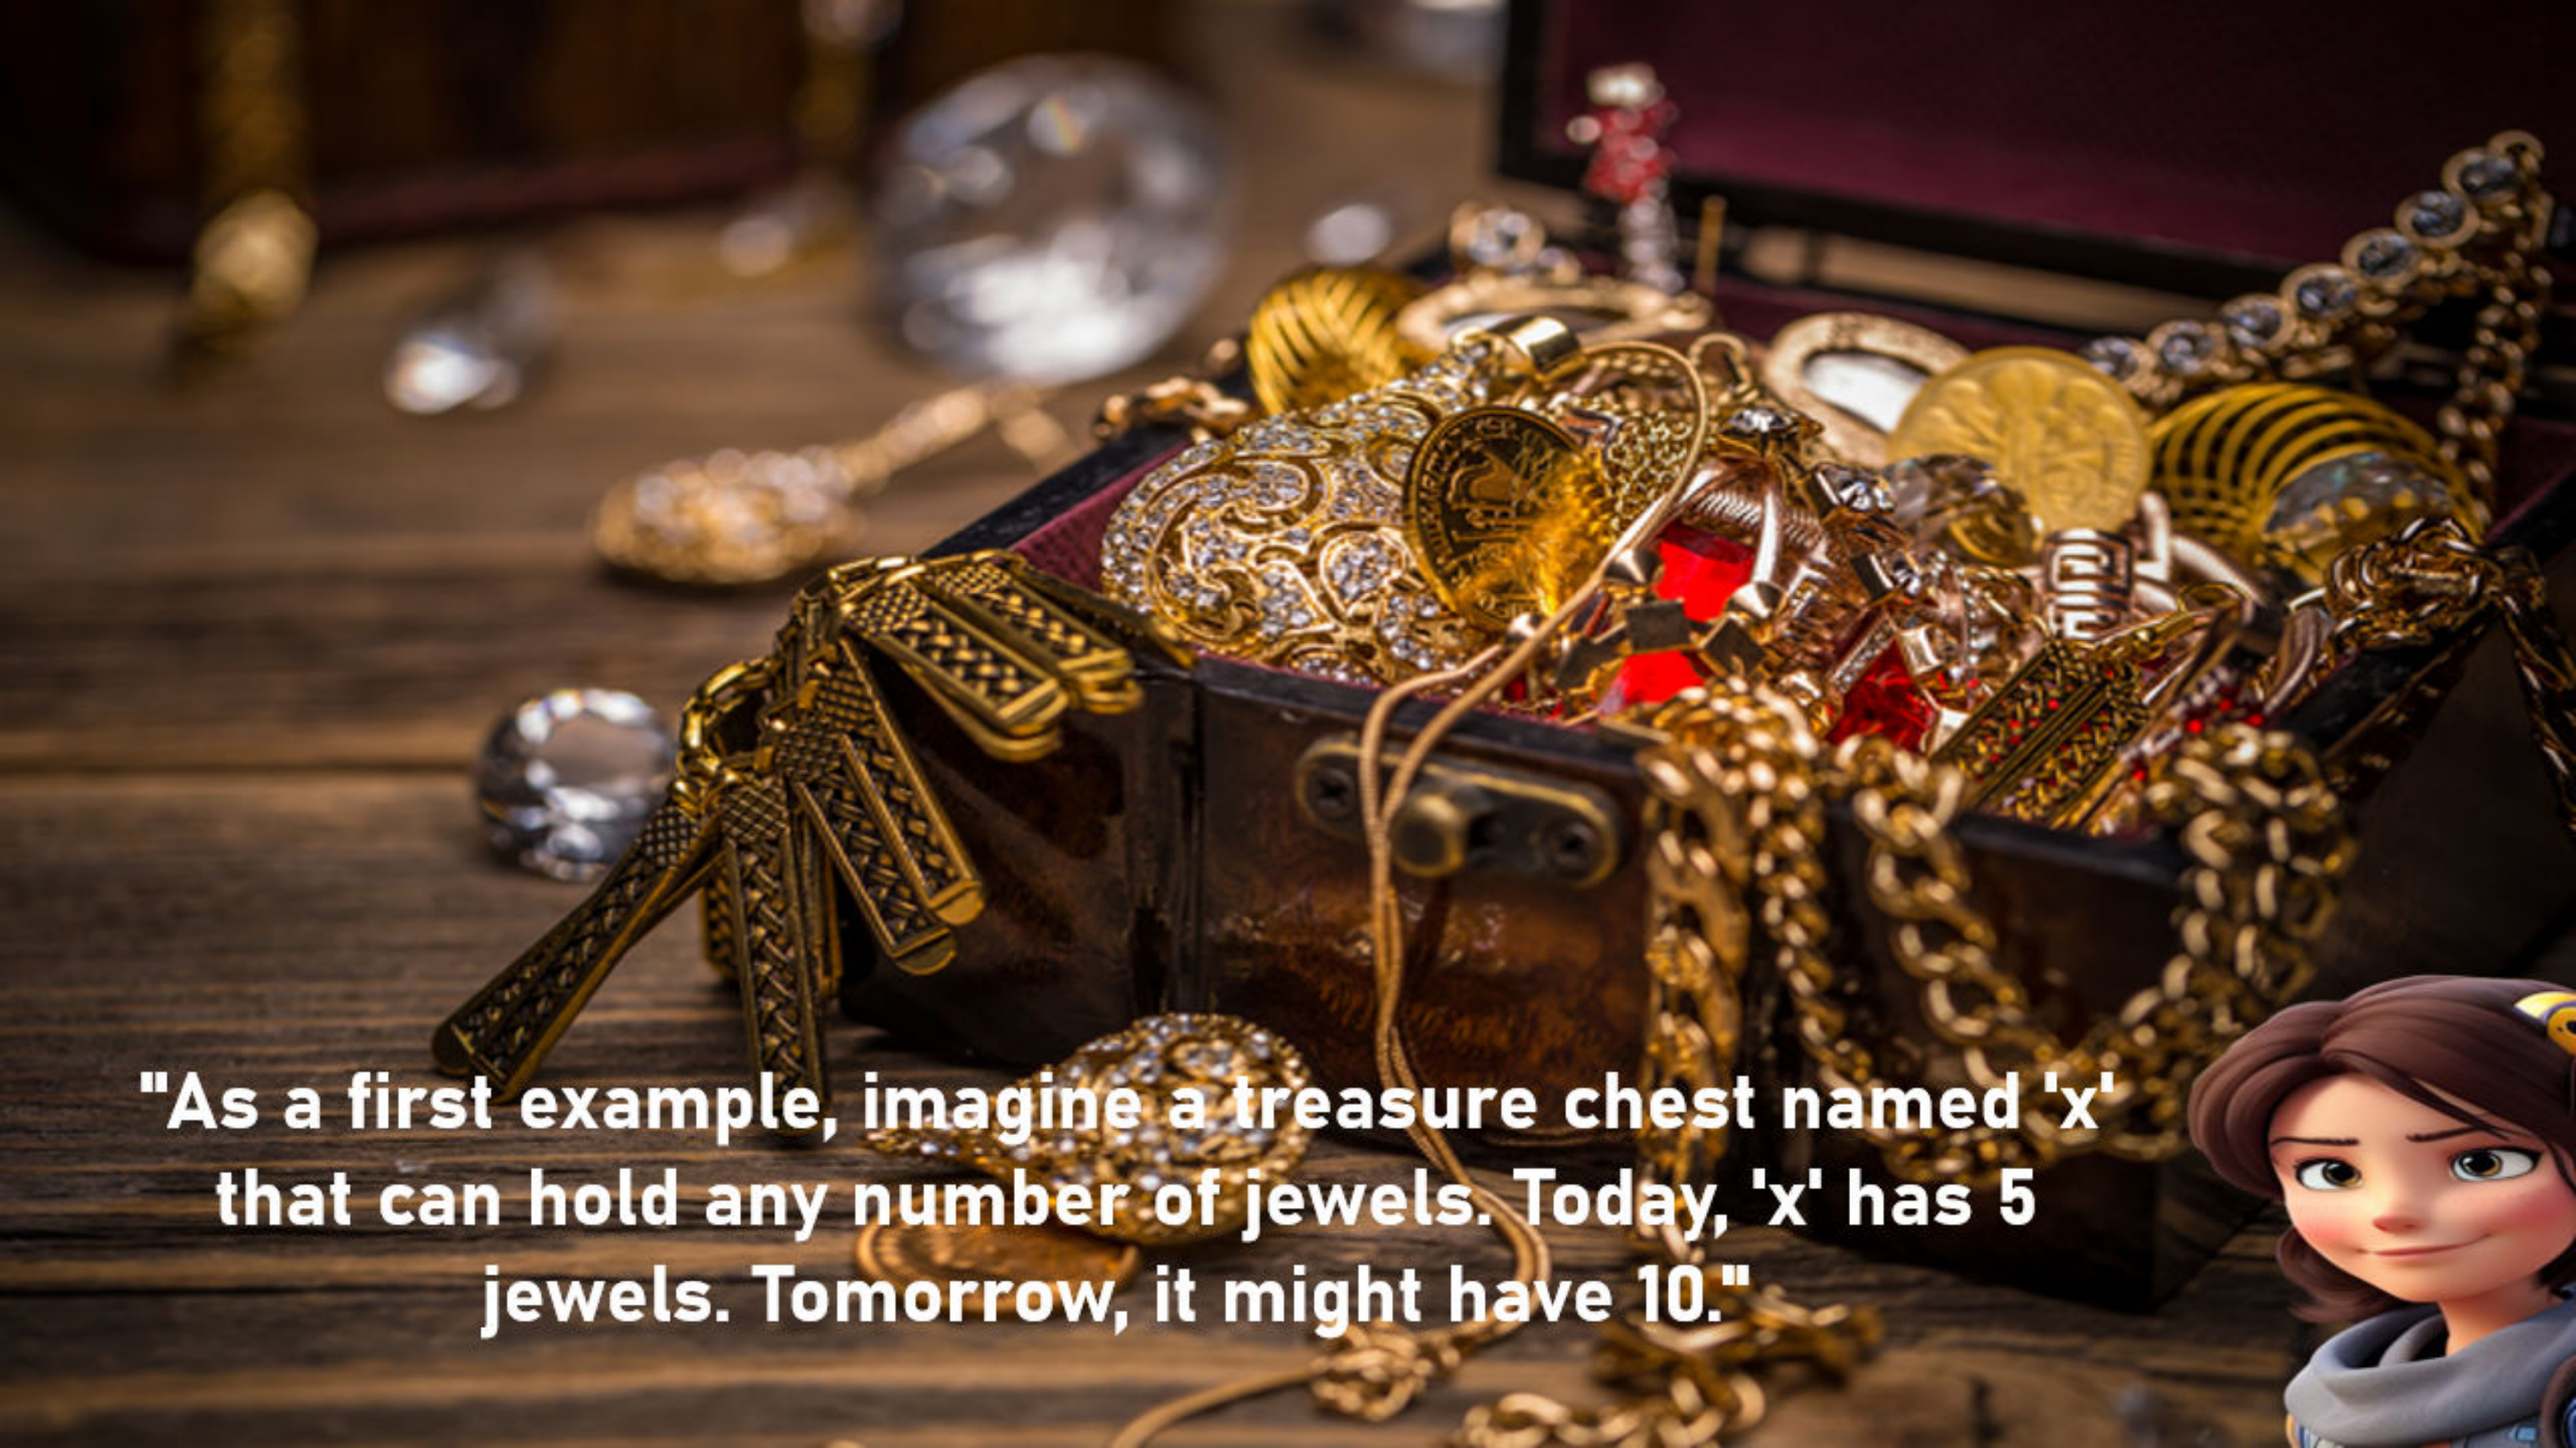


In a display of wonder, Azad's LED lights flickered on and off, while he expressed in his electronic voice, "Wow, Jina! Variables are extremely useful. They are the dynamic players in our world".



Azad's LED lights glowed with joy and astonishment, and with his electronic voice said: "Thanks my dear teacher Jina! Now I need some examples to illustrate variables."

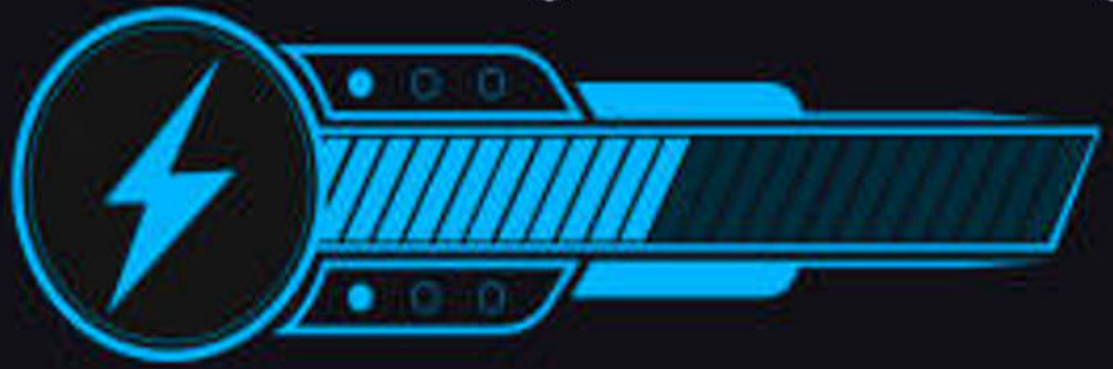
Jina smiles and says, "Sure, Azad! I will be happy to illustrate variables with some examples."



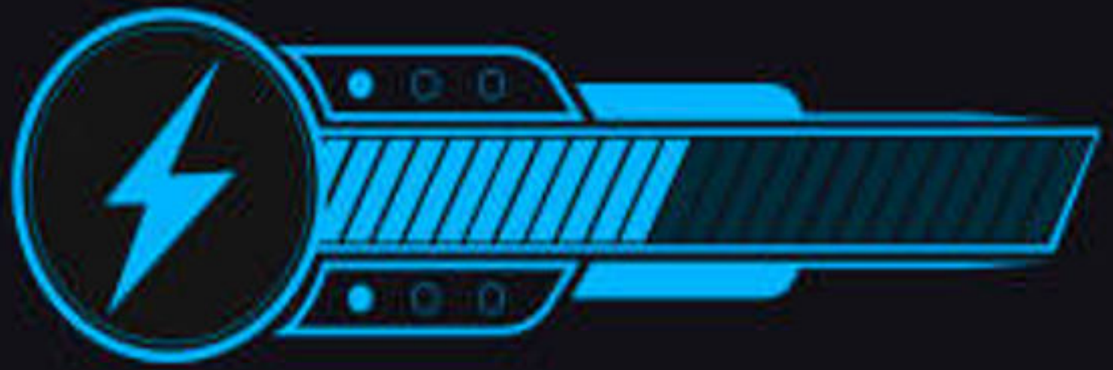
"As a first example, imagine a treasure chest named 'x' that can hold any number of jewels. Today, 'x' has 5 jewels. Tomorrow, it might have 10."

"The number of jewels can change, just like the value of 'x'. That's why variables are so useful!"

"Variables are everywhere, Azad!" Jina exclaimed. "Think about your favorite game. The score is a variable, right? It can change as you play."



Jina continues, "In a video game, variables help us keep track of the player's score, health, progress and so on."



"As a second example Imagine, we have a variable called 'score' that starts at zero. Every time you collect a coin, the 'score' increases by one. If you collect five coins, the 'score' becomes five. Variables help us keep track of these changes."

The full version of this book is available on Amazon in various languages.

Zagros Adventurs: Variables (Learning through the magical tales of adventure, resistance and friendship set in the stunning Zagros Book 4) (English Edition) Kindle Ausgabe

Englisch Ausgabe | von Karim Salehi (Autor) | Format: Kindle Ausgabe

Buch 4 von 5: Learning through the magical tales of adventure, resistance and friendship set in the stunning Zagros

Through this adventure, Jina and Azad discovered that learning is fun and that variables are all around us, helping us track any changes in the world and understand and explore the world in exciting new ways.
Jina and Azad realized the transformative power of variables. They learned how variables act as dynamic placeholders, allowing them to monitor and analyze changes in data, ultimately leading to a deeper understanding of the world around them.
